(54) Title: SUBSTITUTED PYRROLOPYRIMIDINES AND PROCESSES FOR THEIR PREPARATION

(57) Abstract

There are described 7H-pyrrolo[2,3-d]pyrimidine derivatives of formula (I) in which the substituents are as defined in claim 1. These compounds inhibit the tyrosine kinase activity of the receptor for the epidermal growth factor (EGF) and c-erbB2 kinase and can be used as anti-tumour agents.

Substituted pyrrolopyrimidines and processes for their preparation

The invention relates to 7H-pyrrolo[2,3-d]pyrimidine derivatives and to processes and novel intermediates for their preparation, to pharmaceutical formulations comprising such derivatives and to the use of these derivatives as medicaments.

The invention relates to 7H-pyrrolo[2,3-d]pyrimidine derivatives of the formula I

in which n is 0 to 3,

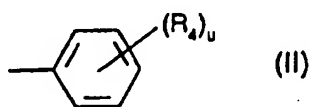

q is 0 or 1,

R is halogen, lower alkyl, hydroxymethyl, aminomethyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxycarbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, it being possible, if two or more radicals R are present in the molecule, for these to be identical to or different from one another,

one of the radicals R₁ and R₂ is hydrogen or lower alkyl,

and the other of the radicals R₁ and R₂ is

a) a radical of the formula II

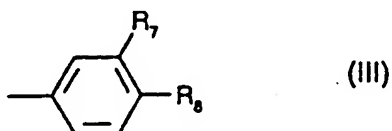

in which u is 1 to 3 and

at least one radical R₄ is amidino, guanidino, ureido, N³-lower alkylureido, N³,N³-di-lower alkylureido, N³-phenylureido, N³,N³-diphenylureido, thiocarbamoyl, thioureido,

N^3 -lower alkylthioureido, N^3,N^3 -di-lower alkylthioureido, lower alkoxycarbonylamino, benzyloxycarbonylamino, morpholine-4-carbonyl, piperazine-1-carbonyl, 4-lower alkylpiperazine-1-carbonyl, lower alkylsulfonylamino, benzenesulfonylamino, toluenesulfonylamino, thiophene-2-carbonylamino, furan-2-carbonylamino, benzylamino, hydroxymethyl, aminomethyl or a radical of the formula $-N=C(R_5)-R_6$, in which R_5 is hydrogen or lower alkyl and R_6 is di-lower alkylamino, piperidino, 4-lower alkylpiperazino or morpholino, and the other radical(s) R_4 is (are) halogen, lower alkyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkoxycarbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, it being possible, if two or more radicals R_4 are present in the molecule, for these to be identical to or different from one another, or is

b) a radical of the formula III

in which R_7 is lower alkoxy or benzyloxy and R_8 is hydroxyl or benzyloxy, or is

c) amino-lower alkyl, whose amino group is substituted by one or two hydroxy-lower alkyl, amino-lower alkyl, carboxy-lower alkyl, lower alkoxycarbonyl-lower alkyl, benzyloxycarbonyl-lower alkyl or benzyl radicals, which in the phenyl moiety are unsubstituted or substituted by halogen, lower alkyl, hydroxymethyl, aminomethyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxycarbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, or is

d) piperidine-1-carbonyl, piperazine-1-carbonyl, 4-lower alkylpiperazine-1-carbonyl, morpholine-4-carbonyl, thiocarbamoyl, a heterocyclic radical bonded via a ring carbon atom and having five ring members and 1-4 ring heteroatoms, selected from oxygen, nitrogen and sulfur, or is

e) 4-lower alkylpiperazinomethyl or a lower alkyl radical which is substituted by a heterocyclic radical other than piperazinyl and having five or six ring members and 1-4 ring heteroatoms, selected from oxygen, nitrogen and sulfur, or is

f) a radical of the formula $-\text{CH}=\text{N}-\text{OR}_9$ in which R_9 is hydrogen or lower alkyl, or
g) if q is 1, additionally to the definitions given above in the sections a) to f) can also be phenyl which is substituted by halogen, lower alkyl, trifluoromethyl or lower alkoxy, and R_3 is hydrogen, lower alkyl, lower alkoxycarbonyl, carbamoyl, N-lower alkylcarbamoyl or N,N-di-lower alkylcarbamoyl, and their salts.

The prefix "lower" used hereinbefore and hereinafter denotes a radical having up to and including a maximum of 7, especially up to and including a maximum of 4, and in particular having 1 or 2, carbon atoms.

Preferably, n is 0 or especially 1. When there is only one substituent R, this substituent is preferably in the 3-position on the phenyl ring. When two substituents R are present, these substituents are preferably in the 3- and 4-positions.

Halogen R is bromine, iodine or preferably fluorine or chlorine. When n is 1, R is preferably chlorine.

Lower alkyl is, for example, methyl.

Lower alkanoyloxy is, for example, acetoxy.

Lower alkoxy is, for example, methoxy.

Lower alkanoyl is, for example, acetyl.

Lower alkoxycarbonyl is, for example, methoxycarbonyl.

N-Lower alkylcarbamoyl is, for example, N-methylcarbamoyl, N-(n-butyl)carbamoyl or N-(3-methylbut-1-yl)carbamoyl.

N,N-Di-lower alkylcarbamoyl is, for example, N,N-di-methylcarbamoyl.

Lower alkanoylamino is, for example, acetylamino.

Lower alkylamino is, for example, methylamino.

N,N-Di-lower alkylamino is, for example, dimethylamino.

Lower alkoxycarbonylmethoxy is, for example, methoxycarbonylmethoxy.

The radical R_1 is preferably hydrogen.

The symbol u is preferably 1. In this case, the radical R_4 is preferably in the 3- or 4-position of the phenyl ring.

Amidino is a radical of the formula $-C(=NH)-NH_2$.

Guanidino is a radical of the formula $-NH-C(=NH)-NH_2$.

Ureido is a radical of the formula $-NH-C(=O)-NH_2$.

N^3 -Lower alkyl ureido is a radical of the formula $-NH-C(=O)-NH$ -lower alkyl, preferably N^3 -ethylureido.

N^3, N^3 -Di-lower alkylureido is a radical of the formula $-NH-C(=O)-N$ (lower alkyl) $_2$.

N^3 -Phenylureido is a radical of the formula $-NH-C(=O)-NH$ -phenyl.

N^3, N^3 -Diphenylureido is a radical of the formula $-NH-C(=O)-N$ (phenyl) $_2$.

Thioureido is a radical of the formula $-NH-C(=S)-NH_2$.

N^3 -Lower alkylthioureido is a radical of the formula $-NH-C(=S)-NH$ -lower alkyl, preferably N^3 -methylthioureido.

N^3, N^3 -Di-lower alkylthioureido is a radical of the formula $-NH-C(=S)-N$ (lower alkyl) $_2$.

Lower alkoxycarbonylamino is, for example, methoxycarbonylamino, ethoxycarbonylamino, isopropoxyloxycarbonylamino or 2-methylpropyloxycarbonylamino.

Morpholine-4-carbonyl is also called morpholinocarbonyl.

4-Lower alkylpiperazine-1-carbonyl is preferably 4-methylpiperazine-1-carbonyl.

Lower alkylsulfonylamino is preferably methylsulfonylamino, ethylsulfonylamino or isopropylsulfonylamino.

The radical of the formula $-N=C(R_5)-R_6$, in which R_5 is hydrogen and R_6 is di-lower alkylamino, is called di-lower alkylaminomethylenamino. Corresponding radicals in which R_6 is piperidino, 4-lower alkylpiperazino or morpholino are called R_6 -methylenamino radicals, in which R_6 is defined as above, e.g. as piperidinomethylamino.

R_5 is preferably hydrogen.

Di-lower alkylamino R_6 is preferably dimethylamino or diethylamino.

4-Lower alkylpiperazino is 4-lower alkylpiperazin-1-yl, preferably 4-methylpiperazin-1-yl.

Morpholino is 4-morpholinyl.

Lower alkoxy R_7 is preferably methoxy.

Amino-lower alkyl R_1 or R_2 whose amino group is substituted by one or two hydroxy-lower alkyl, amino-lower alkyl, carboxy-lower alkyl, lower alkoxy-carbonyl-lower alkyl, benzyloxycarbonyl-lower alkyl or benzyl radicals which in the phenyl moiety are unsubstituted or substituted by halogen, lower alkyl, hydroxymethyl, aminomethyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxy-carbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, is preferably appropriately substituted aminomethyl.

Amino-lower alkyl R_1 or R_2 whose amino group is substituted by one or two hydroxy-lower alkyl radicals is preferably, for example, a radical of the formula $-\text{CH}_2\text{-NH}(\text{CH}_2\text{-CH}_2)_2$.

Amino-lower alkyl R_1 or R_2 whose amino group is substituted by one or two benzyl radicals which in the phenyl moiety are unsubstituted or substituted by halogen, lower alkyl, hydroxymethyl, aminomethyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxy-carbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, is preferably, for example, a radical of the formula $-\text{CH}_2\text{-NH-CH}_2\text{-C}_6\text{H}_4\text{-OCH}_3$,

such as, in particular, 4-methoxyphenylmethylaminomethyl, or 4-hydroxyphenylmethylamino-methyl.

Thiocarbamoyl is the radical of the formula $-\text{C}(=\text{S})\text{-NH}_2$ and is also called aminothiocabonyl.

A heterocyclic radical R_1 or R_2 bonded via a ring carbon atom and having five ring members and 1-4 ring heteroatoms, selected from oxygen, nitrogen and sulfur, is unsubstituted or substituted, e.g. pyrrolyl, thienyl, furyl or preferably tetrazol-5-yl which is unsubstituted or substituted by lower alkyl, or thiazol-2-yl which is unsubstituted or substituted by lower alkoxyphenyl, e.g. thiazol-2-yl, 4-(4-methoxyphenyl)thiazol-2-yl, 4-ethylthiazol-2-yl or 4,5-dimethylthiazol-2-yl.

Tetrazol-5-yl is 1H-tetrazol-5-yl or the tautomeric 2H-tetrazol-5-yl or a mixture of these two tautomeric forms.

Tetrazol-5-yl substituted by lower alkyl is N¹-lower alkyltetrazol-5-yl or N²-lower alkyltetrazol-5-yl, in particular 1-methyltetrazol-5-yl or 2-methyltetrazol-5-yl.

A heterocyclic radical other than piperazinyl and having five or six ring members and 1-4 ring heteroatoms, selected from oxygen, nitrogen and sulfur, is such an unsubstituted or substituted radical, e.g. pyrrolyl, thienyl, furyl, tetrazol-5-yl which is unsubstituted or substituted by lower alkyl; thiazol-2-yl which is unsubstituted or substituted by lower alkoxyphenyl, or morpholino or 4-lower alkylpiperazin-1-yl.

Lower alkyl R₁ or R₂ which is substituted by such a heterocyclic radical is preferably appropriately substituted methyl, preferably 4-methylpiperazin-1-ylmethyl or morpholinomethyl.

The radical -CH=N-OR₃, R₁ or R₂ can be present in the trans- or cis-configuration.

Phenyl R₁ or R₂ which is substituted by halogen, lower alkyl, trifluoromethyl or lower alkoxy is, for example, 4-methoxyphenyl. R₁ or R₂ can only be phenyl which is substituted in this way if in formula I the symbol q is 1.

R₃ is preferably methyl.

Salts of compounds of the formula I are especially acid addition salts with organic or inorganic acids, especially the pharmaceutically acceptable, non-toxic salts. Suitable inorganic acids are, for example, carbonic acid (preferably in the form of carbonates or hydrogencarbonates); hydrohalic acids, such as hydrochloric acid; sulfuric acid; or phosphoric acid. Suitable organic acids are, for example, carboxylic, phosphonic, sulfonic or sulfamic acids, for example acetic acid, propionic acid, octanoic acid, decanoic acid, dodecanoic acid, glycolic acid, lactic acid, 2-hydroxybutyric acid, gluconic acid, glucosemonocarboxylic acid, fumaric acid, succinic acid, adipic acid, pimelic acid, suberic acid, azelaic acid, malic acid, tartaric acid, citric acid, glucaric acid, galactaric acid, amino acids, such as glutamic acid, aspartic acid, N-methylglycine, acetylaminoacetic acid, N-acetylaspargine or N-acetylcystine, pyruvic acid, acetoacetic acid, phosphoserine, 2- or 3-glycerophosphoric acid, glucose-6-phosphoric acid, glucose-1-phosphoric acid, fructose-

1,6-bisphosphoric acid, maleic acid, hydroxymaleic acid, methylmaleic acid, cyclohexanecarboxylic acid, adamantanecarboxylic acid, benzoic acid, salicylic acid, 1- or 3-hydroxynaphthyl-2-carboxylic acid, 3,4,5-trimethoxybenzoic acid, 2-phenoxybenzoic acid, 2-acetoxybenzoic acid, 4-aminosalicylic acid, phthalic acid, phenylacetic acid, mandelic acid, cinnamic acid, nicotinic acid, isonicotinic acid, glucuronic acid, galacturonic acid, methane- or ethane-sulfonic acid, 2-hydroxyethanesulfonic acid, ethane-1,2-disulfonic acid, benzenesulfonic acid, 2-naphthalenesulfonic acid, 1,5-naphthalenedisulfonic acid, 2-, 3- or 4-methylbenzenesulfonic acid, methylsulfuric acid, ethylsulfuric acid, dodecylsulfuric acid, N-cyclohexylsulfamic acid, N-methyl-, N-ethyl- or N-propyl-sulfamic acid, or other organic protonic acids, such as ascorbic acid.

Compounds of the formula I having at least one acid group, for example a free carboxyl group, are capable of forming internal salts or metal or ammonium salts, such as alkali metal or alkaline earth metal salts, for example sodium, potassium, magnesium or calcium salts, or ammonium salts with ammonia or suitable organic amines, such as tertiary monoamines, for example triethylamine or tri(2-hydroxyethyl)amine, or heterocyclic bases, for example N-ethylpiperidine or N,N'-dimethylpiperazine.

For isolation or purification purposes it is also possible to use pharmaceutically unsuitable salts, for example picrates or perchlorates. Only salts that are pharmaceutically acceptable and non-toxic (at the appropriate doses) are used therapeutically and these salts are therefore preferred.

In view of the close relationship between the novel compounds in free form and in the form of their salts, including those salts that can be used as intermediates, for example in the purification or identification of the novel compounds, hereinbefore and hereinafter the free compounds are to be understood as meaning also the corresponding salts, as appropriate and expedient.

The compounds of the formula I have valuable pharmacologically useful properties. In particular they display specific inhibitory activities that are of pharmacological interest. They are effective primarily as protein tyrosine kinase inhibitors and/or (furthermore) as inhibitors of protein serine/threonine kinases; they exhibit, for example, potent inhibition of the tyrosine

kinase activity of the receptor for the epidermal growth factor (EGF) and of c-erbB2 kinase. These receptor-specific enzyme activities play a key role in signal transmission in a large number of mammalian cells, including human cells, especially epithelial cells, cells of the immune system and cells of the central and peripheral nervous system. For example, in various cell types, EGF-induced activation of receptor-associated protein tyrosine kinase (EGF-R-PTK) is a prerequisite for cell division and thus for the proliferation of the cell population. An increase in the number of EGF-receptor-specific tyrosine kinase inhibitors thus inhibits the proliferation of the cells. The same applies analogously to the other protein kinases mentioned hereinbefore and hereinafter.

In addition to or instead of inhibiting EGF receptor protein tyrosine kinase, the compounds of the formula I also inhibit to varying extents other protein tyrosine kinases that are involved in signal transmission mediated by trophic factors, for example abl kinase, especially v-abl kinase, kinases from the family of the src kinases, especially c-src kinase, lck, fyn; other kinases of the EGF family, for example c-erbB2 kinase (HER-2), c-erbB3 kinase, c-erbB4 kinase; members of the family of the PDGF receptor protein tyrosine kinases, for example PDGF receptor kinase, CSF-1 receptor kinase, Kit receptor kinase, VEGF receptor kinase and FGF receptor kinase; the receptor kinase of the insulin-like growth factor (IGF-1 kinase), and serine/threonine kinases, for example protein kinase C or cdc kinases, all of which play a part in growth regulation and transformation in mammalian cells, including human cells.

The inhibition of EGF-receptor-specific protein tyrosine kinase (EGF-R-PTK) can be demonstrated using known methods, for example using the recombinant intracellular domain of the EGF receptor (EGF-R ICD; see, for example, E. McGlynn *et al.*, *Europ. J. Biochem.* 207, 265-275 (1992)). Compared with the control without inhibitor, the compounds of the formula I inhibit the enzyme activity by 50 % (IC_{50}), for example in a concentration of from 0.0005 to 1 μ M, especially from 0.001 to 0.1 μ M.

The action of the compounds of the formula I on EGF-stimulated cellular tyrosine phosphorylation in the EGF-receptor can be determined in the human A431 epithelial carcinoma cell line by means of an ELISA which is described in U. Trinks *et al.*, *J. Med. Chem.* 37:7, 1015-1027 (1994). In this test (EGFR-ELISA) the compounds of the formula I exhibit an IC_{50} of approximately 0.001 to 1 μ M.

Stimulation of quiescent BALB/c3T3 cells with EGF rapidly induces the expression of c-fos mRNA. Pretreatment of the cells with a compound of the formula I before the stimulation with EGF inhibits c-fos expression at an IC_{50} of approximately from 0.001 to 0.1 μ M. This test procedure is likewise described in U. Trinks *et al.*, J. Med. Chem. 37:7, 1015-1027 (1994).

In the micromolar range too, the compounds of the formula I also exhibit, for example, inhibition of the cell growth of EGF-dependent cell lines, for example the epidermoid BALB/c mouse keratinocyte cell line (see Weissmann, B.A., and Aaronson, S.A., Cell 32, 599 (1983)) or the A431 cell line, which are recognized as useful standard sources of EGF-dependent epithelial cells (see Carpenter, G., and Zendejgi, J. Anal. Biochem. 153, 279-282 (1985)). In a known test method (see Meyer *et al.*, Int. J. Cancer 43, 851 (1989)), the inhibitory activity of the compounds of the formula I is determined, briefly, as follows: BALB/MK cells (10 000/microtitre plate well) are transferred to 96-well microtitre plates. The test compounds (dissolved in DMSO) are added in a series of concentrations (dilution series) in such a manner that the final concentration of DMSO is not greater than 1 % (v/v). After the addition, the plates are incubated for three days during which the control cultures without test compound are able to undergo at least three cell-division cycles. The growth of the MK cells is measured by means of Methylene Blue staining: after the incubation the cells are fixed with glutaraldehyde, washed with water and stained with 0.05 % Methylene Blue. After a washing step the stain is eluted with 3 % HCl and the optical density per well of the microtitre plate is measured using a Titertek Multiscan at 665 nm. IC_{50} values are determined by a computer-aided system using the formula:

$$IC_{50} = [(OD_{test} - OD_{start}) / (OD_{control} - OD_{start})] \times 100.$$

The IC_{50} value in these experiments is given as that concentration of the test compound in question that results in a cell count that is 50 % lower than that obtained using the control without inhibitor. The compounds of the formula I display inhibitory activity in the micromolar range, for example an IC_{50} of approximately from 0.1 to 1 μ M.

The compounds of the formula I display inhibition of the growth of tumour cells also *in vivo*, as shown, for example, by the test described below: the test is based on inhibition of the

growth of the human epidermoid carcinoma A431 (ATCC No. CRL 1555; American Type Culture Collection, Rockville, Maryland, USA; see Santon, J.B., *et al.*, Cancer Research 46, 4701-4705 (1986) and Ozawa, S., *et al.*, Int. J. Cancer 40, 706-710 (1987)), which is transplanted into female BALB/c nude mice (Bomholtgard, Denmark). This carcinoma exhibits a growth that correlates with the extent of the expression of the EGF-receptor. In the experiment, tumours having a volume of approximately 1 cm³ cultured *in vivo* are surgically removed from experimental animals under sterile conditions. These tumours are comminuted and suspended in 10 volumes (w/v) of phosphate-buffered saline. The suspension is injected s.c. (0.2 ml/mouse in phosphate-buffered saline) into the left flank of the animals. Alternatively, 1 x 10⁶ cells from an *in vitro* culture in 0.2 ml of phosphate-buffered saline can be injected. Treatment with test compounds of the formula I is started 5 or 7 days after transplantation, when the tumours have reached a diameter of 4-5 mm. The active compound in question is administered (in different doses for different animal groups) once a day for 15 successive days. The tumour growth is determined by measuring the diameter of the tumours along three axes that are perpendicular to each other. The tumour volumes are calculated using the known formula $p \times L \times D^2/6$ (see Evans, B.D., *et al.*, Brit. J. Cancer 45, 466-8 (1982)). The results are given as treatment/control percentages ($T/C \times 100 = T/C \%$). At a dose of from 3 to 50 mg/kg of active ingredient, distinct inhibition of the tumour growth is found, for example T/C % values of less than 10, which indicates strong inhibition of tumour growth.

As well as or instead of inhibiting EGF-receptor protein tyrosine kinase, the compounds of the formula I also inhibit other protein tyrosine kinases that are involved in signal transmission mediated by trophic factors, for example abl kinase, such as especially v-abl kinase (IC₅₀ for example from 0.01 to 5 µM), kinases from the family of the src kinases, such as especially c-src kinase (IC₅₀ for example from 0.1 to 10 µM) and c-erbB2 kinase (HER-2), and serine/threonine kinases, for example protein kinase C, all of which are involved in growth regulation and transformation in mammalian cells, including human cells.

The abovementioned inhibition of v-abl tyrosine kinase is determined by the methods of N. Lydon *et al.*, Oncogene Research 5, 161-173 (1990) and J. F. Geissler *et al.*, Cancer Research 52, 4492-4498 (1992). In these methods [Val⁵]-angiotensin II and [γ -³²P]-ATP are used as substrates.

The inhibition of c-erbB2 tyrosine kinase (HER-2) can be determined, for example, analogously to the method used for EGF-R-TPK (see C. House *et al.*, *Europ. J. Biochem.* **140**, 363-367 (1984)). The c-erbB2 kinase can be isolated, and its activity determined, by means of protocols known per se, for example in accordance with T. Akiyama *et al.*, *Science* **232**, 1644 (1986).

The compounds of the formula I which inhibit the tyrosine kinase activity of the receptor for the epidermal growth factor (EGF) or furthermore of the other protein tyrosine kinases mentioned are therefore useful, for example, in the treatment of benign or malignant tumours. They are capable of effecting tumour regression and of preventing the formation of tumour metastases and the growth of micrometastases. They can be used especially in the case of epidermal hyperproliferation (psoriasis), in the treatment of neoplasias of epithelial character, e.g. mammary carcinomas, and in leukaemias. In addition, the compounds of the formula I (especially the novel compounds) can be used in the treatment of those disorders of the immune system in which several or, especially, individual protein tyrosine kinases and/or (furthermore) protein serine/threonine kinases are involved; these compounds of the formula I can also be used in the treatment of those disorders of the central or peripheral nervous system in which signal transmission by several or, especially, a single protein tyrosine kinase and/or (furthermore) protein serine/threonine kinases is involved.

In general, the present invention relates also to the use of the compounds of the formula I for the inhibition of the protein kinases mentioned.

The compounds according to the invention can be used both alone and in combination with other pharmacologically active compounds, for example together with inhibitors of the enzymes of polyamine synthesis, inhibitors of protein kinase C, inhibitors of other tyrosine kinases, cytokines, negative growth regulators, for example TGF- β or IFN- β , aromatase inhibitors, antioestrogens and/or cytostatic agents.

In the preferred subjects of the invention mentioned hereinafter, general definitions can be replaced by the more specific definitions given at the beginning, where appropriate and expedient.

Preferred compounds of the formula 1 are those according to Claim 1, in which R_1 is hydrogen,

R_2 is pyrrolyl, thienyl, furyl, tetrazol-5-yl which is unsubstituted or substituted by lower alkyl, or thiazol-2-yl which is unsubstituted or substituted by lower alkoxyphenyl, or methyl which is substituted by pyrrolyl, thienyl, furyl, morpholino, 4-lower alkylpiperazin-1-yl, tetrazol-5-yl which is unsubstituted or substituted by lower alkyl, or thiazol-2-yl which is unsubstituted or substituted by lower alkoxyphenyl, and the other radicals and symbols are as defined above, and their salts.

Very preferred compounds of the formula I are those in which

n is 0 or 1,

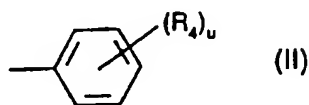

q is 0 or 1,

R is chlorine,

R_1 is hydrogen,

R_2 is

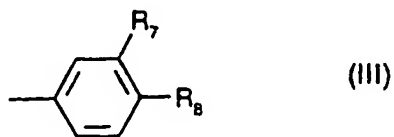

a) a radical of the formula II

in which u is 1 and

R_4 is N^3 -lower alkylureido, N^3 -phenylureido, N^3 -lower alkylthioureido, lower alkoxycarbonylamino, benzyloxycarbonylamino, morpholine-4-carbonyl, piperazine-1-carbonyl, 4-lower alkylpiperazine-1-carbonyl, lower alkylsulfonylamino, benzenesulfonylamino, toluenesulfonylamino, furan-2-carbonylamino, thiophene-2-carbonylamino, benzylamino, hydroxymethyl or a radical of the formula $-N=C(R_5)-R_6$ in which R_5 is hydrogen or lower alkyl and R_6 is di-lower alkylamino, piperidino, 4-lower alkylpiperazino or morpholino, or is

b) a radical of the formula III

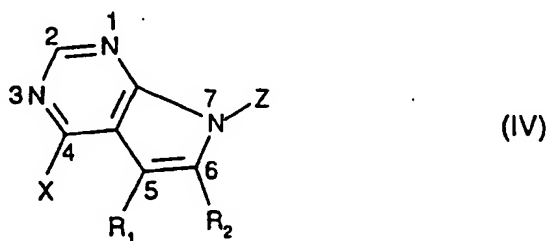

in which R_7 is lower alkoxy and R_8 is hydroxyl or benzyloxy, or is

- c) aminomethyl whose amino group is substituted by one or two hydroxy-lower alkyl or benzyl radicals which in the phenyl moiety are unsubstituted or substituted by hydroxyl or lower alkoxy, or is
- d) piperazine-1-carbonyl, 4-lower alkylpiperazine-1-carbonyl, morpholine-4-carbonyl, thiocarbamoyl, thiazol-2-yl, 4-(4-methoxyphenyl)thiazol-2-yl, 4-ethylthiazol-2-yl, 4,5-dimethylthiazol-2-yl, tetrazol-5-yl, 2-methyltetrazol-5-yl or 1-methyltetrazol-5-yl, or is
- e) 4-lower alkylpiperazinomethyl or morpholinomethyl, or is
- f) a radical of the formula $-\text{CH}=\text{N}-\text{OR}_9$, in which R_9 is hydrogen or lower alkyl, or
- g) if q is 1, additionally to the definitions given above in sections a) to f) can also be phenyl which is substituted by lower alkoxy, and R_3 is hydrogen or lower alkyl, and their salts.

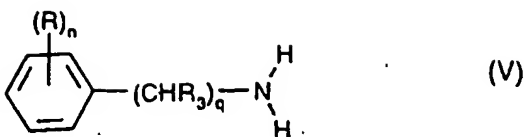

The most preferred compounds of the formula I are those described in the Examples and their pharmaceutically acceptable salts.

The compounds of the formula I and their salts are prepared by processes known per se. The process according to the invention comprises

- a) reacting a pyrrolo[2,3-d]pyrimidine derivative of the formula IV

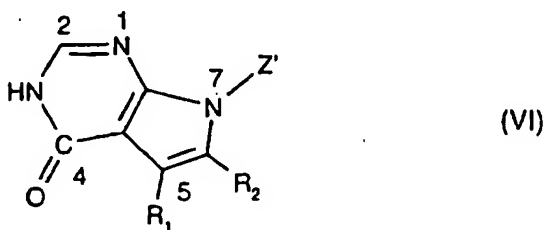

in which X is a suitable leaving group, Z is hydrogen or 1-aryl-lower alkyl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radicals R_1 and R_2 if necessary being protected by easily removable protective groups, with an aniline derivative of the formula V

in which R, R₃, n and q are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, and removing protective groups present and, if present, the 1-aryl-lower alkyl radical Z, or

b) reacting a pyrrolo[2,3-d]pyrimidin-4-one derivative of the formula VI

in which Z' is 1-aryl-lower alkyl and R₁ and R₂ are as defined above for compounds of the formula I, free functional groups present in the radicals R₁ and R₂ if necessary being protected by easily removable protective groups, in the presence of a dehydrating agent and a tertiary amine, with a phenylamine of the formula V above and removing protective groups present, or

c) for the preparation of a compound of the formula I in which the radical R is hydroxyl or in which one of the radicals R₁ or R₂ is amino-lower alkyl whose amino group is substituted by one or two benzyloxycarbonyl-lower alkyl or benzyl radicals which are substituted by hydroxyl in the phenyl moiety and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which the radical R is methoxy or in which one of the radicals R₁ or R₂ is amino-lower alkyl whose amino group is substituted by one or two benzyloxycarbonyl-lower alkyl or benzyl radicals which are substituted by methoxy in the phenyl moiety, and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radicals R, R₁ and R₂ if necessary being protected by easily

removable protective groups, with boron tribromide, and removing protective groups present, or

d) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is aminomethyl whose amino group is substituted by one or two hydroxy-lower alkyl, amino-lower alkyl, carboxy-lower alkyl, lower alkoxy-carbonyl-lower alkyl, benzyloxycarbonyl-lower alkyl or benzyl radicals which in the phenyl moiety are unsubstituted or substituted by halogen, lower alkyl, hydroxymethyl, aminomethyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxy-carbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, or in which one of the radicals R_1 and R_2 is 4-lower alkylpiperazinomethyl, morpholinomethyl or piperidinomethyl and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is formyl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, with an amine of the formula VII

in which

α) R_{10} is hydrogen, hydroxy-lower alkyl, amino-lower alkyl, carboxy-lower alkyl, lower alkoxy-carbonyl-lower alkyl, benzyloxycarbonyl-lower alkyl or benzyl, the benzyloxycarbonyl-lower alkyl or benzyl radicals in the phenyl moiety being unsubstituted or substituted by halogen, lower alkyl, hydroxymethyl, aminomethyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxy-carbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, and

R_{11} is hydroxy-lower alkyl, amino-lower alkyl, carboxy-lower alkyl, lower alkoxy-carbonyl-lower alkyl, benzyloxycarbonyl-lower alkyl or benzyl, the benzyloxycarbonyl-lower alkyl or benzyl radicals in the phenyl moiety being unsubstituted or substituted by halogen, lower alkyl, hydroxymethyl, aminomethyl,

- 16 -

hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxy carbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, or

β) in which the radicals R_{10} and R_{11} together are pentane-1,5-diyl, 3-N-lower alkyl-3-azapentane-1,5-diyl or 3-oxapentane-1,5-diyl, catalytically hydrogenating the product and then removing protective groups present, or

e) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula $-\text{CH}=\text{N}-\text{OR}_9$ in which R_9 is hydrogen or lower alkyl, and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I, in which one of the radicals R_1 and R_2 is formyl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, with a hydroxylamine derivative of the formula VIII

in which R_{12} is hydrogen or lower alkyl, and removing protective groups present, or

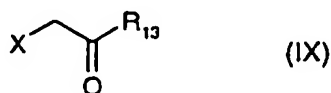

f) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is piperidine-1-carbonyl, piperazine-1-carbonyl, 4-lower alkylpiperazine-1-carbonyl or morpholine-4-carbonyl, and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is carboxyl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, or a reactive carboxylic acid derivative of such a compound, with an amine of the formula VII

in which the radicals R_{10} and R_{11} together are pentane-1,5-diyl, 3-azapentane-1,3-diyl, 3-N-lower alkyl-3-azapentane-1,3-diyl or 3-oxapentane-1,3-diyl, and then removing protective groups present, or

g) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is thiocarbamoyl and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is aminocarbonyl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, with Lawesson's reagent, and then removing protective groups present, or

h) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is R_{13} -thiazol-2-yl in which R_{13} in each case is unsubstituted or substituted lower alkyl or phenyl and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is thiocarbamoyl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, with a compound of the formula IX

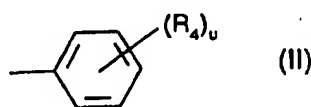

in which X is a leaving group and R_{13} in each case is unsubstituted or substituted lower alkyl or phenyl, free functional groups present in the radical R_{13} if necessary being protected by easily removable protective groups, and then removing protective groups present, or

i) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is tetrazol-5-yl and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is cyano and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected

by easily removable protective groups, with a suitable alkali metal azide, and then removing protective groups present, or

j) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is 2-lower alkyltetrazol-5-yl and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is tetrazol-5-yl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, with the appropriate lower alkyl iodide, and then removing protective groups present, or

k) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II

in which at least one radical R_4 is lower alkylsulfonylamino, benzenesulfonylamino or toluenesulfonylamino and the other substituents and symbols are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II in which at least one radical R_4 is amino and the other substituents and symbols are as defined above for compounds of the formula I, free functional groups present in the radical R and, if present, the other radicals R_4 if necessary being protected by easily removable protective groups, with a compound of the formula X

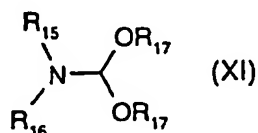

in which X is chlorine or bromine and R_{14} is lower alkyl, phenyl or 4-methylphenyl, and then removing protective groups present, or

l) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II

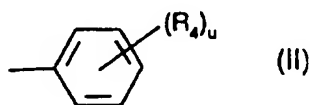

in which at least one radical R_4 is a radical of the formula $-N=C(R_5)-R_6$ in which R_5 is hydrogen and R_6 is as defined above for compounds of the formula I and the other substituents and symbols are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II in which at least one radical R_4 is amino and the other substituents, and symbols are as defined above for compounds of the formula I, free functional groups present in the radical R and, if present, the other radicals R_4 if necessary being protected by easily removable protective groups, with an acetal of the formula XI

in which R_{15} and R_{16} are each individually lower alkyl or together pentane-1,5-diyl, 3-N-lower alkyl-3-azapentane-1,5-diyl or 3-oxapentane-1,5-diyl, and R_{17} is lower alkyl, and then removing protective groups present, or

m) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II

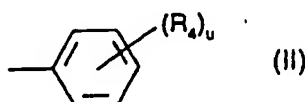

in which at least one radical R_4 is N^3 -lower alkylureido or N^3 -phenylureido and the other substituents and symbols are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II in which at least one radical R_4 is amino and the other substituents and symbols are as defined above for compounds of the formula I, free functional

groups present in the radical R and, if present, the other radicals R_4 if necessary being protected by easily removable protective groups, with an isocyanate of the formula XII

in which R_{18} is lower alkyl or phenyl, and then removing protective groups present, or

n) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II

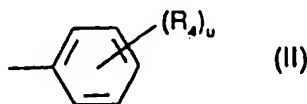

in which at least one radical R_4 is N^3 -lower alkylthioureido or N^3 -phenylthioureido and the other substituents and symbols are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II in which at least one radical R_4 is amino and the other substituents and symbols are as defined above for compounds of the formula I, free functional groups present in the radical R and, if present, the other radicals R_4 if necessary being protected by easily removable protective groups, with an isothiocyanate of the formula XIII

in which R_{18} is lower alkyl or phenyl, and then removing protective groups present, or

o) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II

in which at least one radical R_4 is lower alkoxy-carbonylamino or benzyloxy-carbonylamino and the other substituents and symbols are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II in which at least one radical R_4 is amino and the other substituents and symbols are as defined above for compounds of the formula I, free functional groups present in the radical R and, if present, the other radicals R_4 if necessary being protected by easily removable protective groups, with a chloroformic acid ester of the formula XIV

in which R_{18} is lower alkyl or benzyl, and then removing protective groups present,

and after carrying out one of the process variants a) to o), if necessary for the preparation of a salt, converting a free compound of the formula I obtained into a salt or, if necessary for the preparation of a free compound, converting a salt of a compound of the formula I obtained into the free compound.

Detailed description of the process steps

The above processes are described in detail below (see also German Offenlegungsschrift No. 30 36 390, published on 13th May 1982, and A. Jorgensen et al., J. Heterocycl. Chem. 22, 859 [1985]). In the more precise description that follows, unless otherwise indicated the radicals R, R_1 and R_2 and n are as defined for compounds of the formula I.

General points:

The end products of the formula I may contain substituents that can also be used as protective groups in starting materials for the preparation of other end products of the formula I. Unless the context indicates otherwise, the term "protective group" is used in this text to denote only a easily removable group that is not a constituent of the particular desired end product of the formula I.

Process a)

In the compound of the formula IV a suitable leaving group X is preferably halogen, such as bromine, iodine or especially chlorine. 1-Aryl-lower alkyl Z is preferably 1-phenyl-lower alkyl, such as especially 1-phenylethyl or, in particular, benzyl.

Free functional groups present in the radicals R₁ and R₂, which if necessary are protected by easily removable protective groups, are especially amino or lower alkylamino.

Protective groups and their introduction and removal are described, for example, in "Protective Groups in Organic Chemistry", Plenum Press, London, New York 1973, and in "Methoden der organischen Chemie", Houben-Weyl, 4th edition, Vol. 15/1, Georg-Thieme-Verlag, Stuttgart 1974 and in Theodora W. Greene, "Protective Groups in Organic Synthesis", John Wiley & Sons, New York 1981. It is a characteristic of protective groups that they can be removed easily, i.e. without undesired secondary reactions taking place, for example by solvolysis, reduction, photolysis or alternatively under physiological conditions.

A protected amino group may be present, for example, in the form of an easily cleavable acylamino, arylmethylanino, etherified mercaptoamino or 2-acyl-lower alkyl-1-enylamino group.

In a corresponding acylamino group, acyl is, for example, the acyl radical of an organic carboxylic acid having, for example, up to 18 carbon atoms, especially an unsubstituted or substituted, for example halo- or aryl-substituted, alkane-carboxylic acid or an unsubstituted or substituted, for example halo-, lower alkoxy- or nitro-substituted, benzoic acid, or of a carbonic acid hemiester. Such acyl groups are, for example, lower alkanoyl, such as formyl, acetyl or propionyl, halo-lower alkanoyl, such as 2-haloacetyl, especially 2-chloro-, 2-bromo-, 2-iodo-, 2,2,2-trifluoro- or 2,2,2-trichloro-acetyl, unsubstituted or substituted, for example halo-, lower alkoxy- or nitro-substituted, benzoyl, for example benzoyl, 4-chloro-benzoyl, 4-methoxybenzoyl or 4-nitrobenzoyl, or lower alkoxycarbonyl that is branched in the 1-position of the lower alkyl radical or suitably substituted in the 1- or 2-position, especially tert-lower alkoxycarbonyl, for example tert-butoxy-

carbonyl, arylmethoxycarbonyl having one or two aryl radicals which are preferably phenyl that is unsubstituted or mono- or poly-substituted, for example, by lower alkyl, especially tert-lower alkyl, such as tert-butyl, lower alkoxy, such as methoxy, hydroxyl, halogen, for example chlorine, and/or by nitro, such as unsubstituted or substituted benzyloxycarbonyl, for example 4-nitrobenzyloxycarbonyl, or substituted diphenylmethoxycarbonyl, for example benzhydryloxycarbonyl or di(4-methoxyphenyl)methoxycarbonyl, aroylmethoxycarbonyl in which the aroyl group is preferably benzoyl that is unsubstituted or substituted, for example, by halogen, such as bromine, for example phenacyloxycarbonyl, 2-halo-lower alkoxy carbonyl, for example 2,2,2-trichloroethoxycarbonyl, 2-bromoethoxycarbonyl or 2-iodoethoxycarbonyl, or 2-(tri-substituted silyl)ethoxycarbonyl in which the substituents are each independently of the others an unsubstituted or substituted, for example lower alkyl-, lower alkoxy-, aryl-, halo- or nitro-substituted, aliphatic, araliphatic, cycloaliphatic or aromatic hydrocarbon radical having up to 15 carbon atoms, such as corresponding, unsubstituted or substituted lower alkyl, phenyl-lower alkyl, cycloalkyl or phenyl, for example 2-tri-lower alkylsilylethoxycarbonyl, such as 2-trimethylsilylethoxycarbonyl or 2-(di-n-butylmethylsilyl)ethoxycarbonyl, or 2-triarylsilylethoxycarbonyl, such as 2-triphenylsilylethoxycarbonyl.

In an arylmethylamino group, which is a mono-, di- or especially tri-aryl-methyl-amino group, the aryl radicals are especially unsubstituted or substituted phenyl radicals. Such groups are, for example, benzyl-, diphenylmethyl- and especially trityl-amino.

An etherified mercapto group in an amino group protected by such a radical is especially arylthio or aryl-lower alkylthio, in which aryl is, especially, phenyl that is unsubstituted or substituted, for example, by lower alkyl, such as methyl or tert-butyl, lower alkoxy, such as methoxy, halogen, such as chlorine, and/or by nitro. A corresponding amino protective group is, for example, 4-nitrophenylthio.

In a 2-acyl-lower alk-1-en-1-yl radical that can be used as an amino protective group, acyl is, for example, the corresponding radical of a lower alkanecarboxylic acid, of a benzoic acid that is unsubstituted or substituted, for example, by lower alkyl, such as methyl or tert-butyl, lower alkoxy, such as methoxy, halogen, such

as chlorine, and/or by nitro, or especially of a carbonic acid hemiester, such as a carbonic acid lower alkyl hemiester. Corresponding protective groups are especially 1-lower alkanoylprop-1-en-2-yl, such as 1-acetylprop-1-en-2-yl, or 1-lower alkoxycarbonylprop-1-en-2-yl, for example 1-ethoxycarbonylprop-1-en-2-yl.

Preferred amino protective groups are acyl radicals of carbonic acid hemiesters, especially tert-butyloxycarbonyl, benzyloxycarbonyl that is unsubstituted or substituted, for example as indicated, for example 4-nitrobenzyloxycarbonyl, or diphenylmethoxycarbonyl, or 2-halo-lower alkoxycarbonyl, such as 2,2,2-trichloroethoxycarbonyl, also trityl or formyl.

The reaction between the derivative of the formula IV and the aniline derivative of the formula V takes place in suitable inert polar solvents, especially alcohols, for example lower alkanols, such as methanol, propanol, isopropanol or especially ethanol or n-butanol. In some cases the addition of a solubilizer, such as 1,3-dimethyl-3,4,5,6-tetrahydro-2(1H)-pyrimidinone (DMPU), is advantageous. The reaction takes place at elevated temperatures, for example in a temperature range from 70 to 150°C, preferably under reflux conditions.

If Z in the compound of the formula IV is 1-aryl-lower alkyl, this radical is removed from the resulting precursor of the compound of the formula I (with Z instead of the hydrogen atom on the nitrogen). This is effected, for example, by treatment with protonic acids, such as hydrochloric acid, phosphoric acids or polyphosphoric acid, at preferred temperatures from 20°C to 150°C and where appropriate in the presence of water (this is especially the preferred method for Z = 1-phenylethyl); or preferably by treatment with Lewis acids, especially AlCl₃, in an aromatic solvent, especially in benzene and/or toluene, at elevated temperature, especially under reflux [this is especially the preferred variant for Z = benzyl; see also the analogous process in Chem. Pharm. Bull. 39(5), 1152 (1991)].

The removal of the protective groups that are not constituents of the desired end product of the formula I is effected in a manner known per se, for example by means of solvolysis, especially hydrolysis, alcoholysis or acidolysis, or by means of reduction,

especially hydrogenolysis or chemical reduction, where appropriate stepwise or simultaneously.

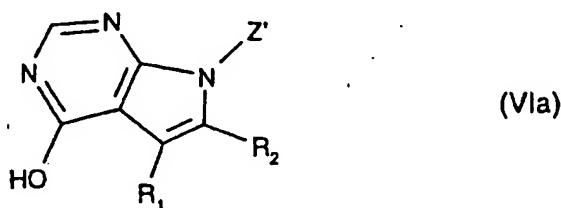

A protected amino group is liberated in a manner known per se and, according to the nature of the protective groups, in various ways, preferably by solvolysis or reduction. 2-Halo-lower alkoxy-carbonylamino (where appropriate after conversion of a 2-bromo-lower alkoxy-carbonylamino group into a 2-iodo-lower alkoxy-carbonylamino group), aroyl-methoxy-carbonylamino or 4-nitrobenzyloxy-carbonylamino can be cleaved, for example, by treatment with a suitable chemical reducing agent, such as zinc in the presence of a suitable carboxylic acid, such as aqueous acetic acid. Aroyl-methoxy-carbonylamino can be cleaved also by treatment with a nucleophilic, preferably salt-forming, reagent, such as sodium thiophenolate, and 4-nitrobenzyloxy-carbonylamino also by treatment with an alkali metal dithionite, for example sodium dithionite. Unsubstituted or substituted diphenyl-methoxy-carbonylamino, tert-lower alkoxy-carbonylamino or 2-trisubstituted silylethoxy-carbonylamino can be cleaved by treatment with a suitable acid, for example formic acid or trifluoroacetic acid; unsubstituted or substituted benzyloxy-carbonylamino can be cleaved, for example, by means of hydrogenolysis, i.e. by treatment with hydrogen in the presence of a suitable hydrogenation catalyst, such as a palladium catalyst; unsubstituted or substituted triaryl-methylamino or formylamino can be cleaved, for example, by treatment with an acid, such as a mineral acid, for example hydrochloric acid, or with an organic acid, for example formic, acetic or trifluoroacetic acid, where appropriate in the presence of water; and an amino group protected by an organic silyl group can be liberated, for example, by means of hydrolysis or alcoholysis. An amino group protected by 2-haloacetyl, for example 2-chloroacetyl, can be liberated by treatment with thiourea in the presence of a base, or with a thiolate salt, such as an alkali metal thiolate, of thiourea, and subsequent solvolysis, such as alcoholysis or hydrolysis, of the resulting condensation product. An amino group protected by 2-substituted silylethoxy-carbonyl can be converted into the free amino group also by treatment with a salt of hydrofluoric acid that yields fluoride anions.

Process b)

1-Aryl-lower alkyl Z' in a compound of the formula VI is especially 1-phenylethyl and also benzyl.

The compound of the formula VI is in tautomeric equilibrium (lactam/lactim form), the lactam form (formula, VI) presumably predominating. Formula VI is used to represent the two possible equilibrium forms.

The lactim form has the formula VIa

in which the radicals are as defined for compounds of the formula VI.

The present invention also relates to the novel compounds of the formulae VI and VIa.

The dehydrating agent is employed especially a strong chemical dehydrating agent, in particular phosphorus pentoxide (P_4O_{10}).

A suitable tertiary amine is primarily ammonia substituted by three radicals selected independently of one another from alkyl, especially lower alkyl, such as methyl or ethyl, and cycloalkyl having 3 to 7 carbon atoms, especially cyclohexyl, for example N,N-dimethyl-N-cyclohexylamine, N-ethyl-N,N-diisopropylamine or triethylamine, or, furthermore, also pyridine, N-methylmorpholine or 4-dimethylaminopyridine.

The reaction between the pyrrolopyrimidinone of the formula VI and the aniline derivative of the formula V takes place at elevated temperature, for example at 200 to 250°C.

Process c)

The reaction is carried out with the exclusion of moisture.

Process d)

The reaction is preferably carried out in a suitable inert solvent, for example a suitable alcohol, such as especially methanol, in the presence of 1,3-dimethyl-3,4,5,6-tetrahydro-2(1H)-pyrimidinone (DMPU) and acetic acid at temperatures from approximately +10°C to +70°C, preferably at room temperature.

The hydrogenation is carried out at elevated pressure or preferably normal pressure in the presence of a suitable hydrogenation catalyst, such as especially Raney nickel, in the above reaction solution at temperatures from approximately 10°C to +70°C, preferably at 50°C.

Process e)

The reaction is preferably carried out in a suitable inert solvent, for example a suitable alcohol, such as especially methanol, at temperatures from approximately +10°C to +100°C, preferably at the boiling temperature of the reaction mixture. In this case the hydroxylamine derivative of the formula VIII is preferably employed as a salt and converted into the free base by addition of an aqueous solution of sodium acetate to the reaction mixture.

Process f)

A reactive carboxylic acid derivative of a compound of the formula I in which one of the radicals R_1 and R_2 is carboxyl and the other substituents are as defined above for compounds of the formula I is, for example, a suitable ester, such as especially an ethyl ester.

Where possible, for example if morpholine is the amine of the formula VII, the amine of the formula VII can be used itself as a solvent. In other cases a suitable inert solvent, e.g. dimethylformamide, together with TPTU (O-(1,2-dihydro-2-oxo-1-pyridyl)-N,N,N',N'-tetramethyluronium tetrafluoroborate) is used. The reaction is preferably carried out at temperatures from approximately +10°C to +150°C, preferably from room temperature to 100°C.

Process g)

Lawesson's reagent is 2,4-di[4-methoxyphenyl]-1,3-dithia-2,4-diphosphetane-2,4-disulfide and is commercially available, inter alia from SIGMA, FLUKA etc.. The reaction is preferably carried out in a suitable inert solvent, e.g. a suitable ether, such as especially a cyclic ether, e.g. tetrahydrofuran, at temperatures from approximately 50°C to 150°C, preferably at the boiling temperature of the reaction mixture.

Process h)

R₁₃ is preferably lower alkyl, such as especially ethyl, or unsubstituted or halo-, lower alkyl-, hydroxymethyl-, aminomethyl-, hydroxyl-, lower alkanoyloxy-, lower alkoxy-, carboxyl-, lower alkanoyl-, benzoyl-, lower alkoxy-carbonyl-, carbamoyl-, N-lower alkylcarbamoyl-, N,N-di-lower alkylcarbamoyl-, cyano-, amino-, lower alkanoylamino-, lower alkylamino-, N,N-di-lower alkylamino- or trifluoromethyl-substituted phenyl, in particular 4-methoxyphenyl.

The reaction is preferably carried out in a suitable inert solvent, e.g. a suitable alcohol, such as especially methanol, or a suitable ether, e.g. dioxane, at temperatures from approximately +20°C to +180°C, preferably at the boiling temperature of the reaction mixture.

Process i)

The reaction is preferably carried out in a suitable inert solvent, e.g. a suitable alcohol, such as especially 1-methoxyethanol, in the presence of lithium chloride, e.g. one and a half times the molar amount of lithium chloride, at temperatures from approximately +20°C to +180°C, preferably at the boiling temperature of the reaction mixture.

Process j)

The reaction is preferably carried out in a suitable inert solvent, e.g. dimethylformamide, in the presence of sodium hydrogen carbonate, at temperatures from approximately 0°C to +180°C, preferably at room temperature. In this case the lower alkyl iodide, such as especially methyl iodide, is preferably added as a solution, e.g. 1 M solution, in a suitable ether, such as dioxane.

Process k)

X is preferably chlorine.

The reaction is preferably carried out in a suitable inert and anhydrous solvent, e.g. dimethylacetamide, at temperatures from approximately -30°C to +70°C, preferably at 0°C.

Process l)

R₁₇ is preferably methyl.

The reaction is preferably carried out in a suitable inert and anhydrous solvent, e.g. an ether, such as tetrahydrofuran, in the presence of triethylamine at temperatures from approximately -10°C to +70°C, preferably at room temperature.

Process m)

The reaction is preferably carried out in a suitable inert and anhydrous solvent, e.g. an ether, such as tetrahydrofuran, advantageously in the presence of dimethylacetamide at temperatures from approximately 0°C to +150°C, preferably at the boiling temperature of the reaction mixture.

Process n)

The reaction is preferably carried out in a suitable inert and anhydrous solvent, e.g. an ether, such as tetrahydrofuran, advantageously in the presence of dimethylacetamide at temperatures from approximately 0°C to +150°C, preferably at the boiling temperature of the reaction mixture.

Process o)

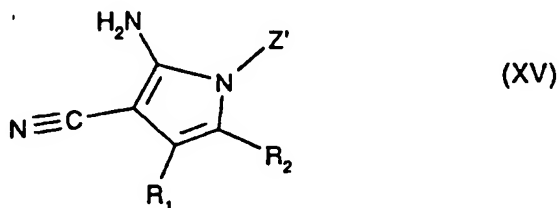

The reaction is preferably carried out in a suitable inert and anhydrous solvent, e.g. an ether, such as dioxane, advantageously in the presence of 2,6-lutidine, at temperatures from approximately -30°C to +150°C, preferably at room temperature.

Starting materials:

The starting materials of the formula IV are novel and the present invention also relates thereto. They can be prepared by processes analogous to those described in German Offenlegungsschrift No. 28 18 676 (published on 8th Nov. 1979) and German Offenlegungsschrift No. 30 36 390 (published on 13th May 1982).

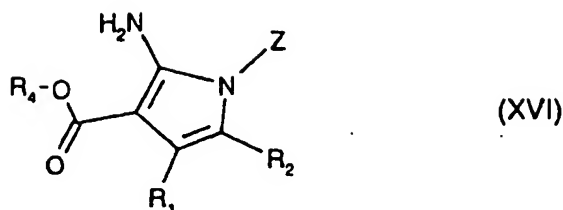

The starting material of the formula IV in which X is chlorine is obtained, for example, from a compound analogous to formula IV in which X is hydroxyl (see the compounds of the formula VIa) by reaction with phosphorus oxychloride (phosphoryl chloride, $P(=O)Cl_3$) with the exclusion of moisture at reflux temperature. If desired, the further reaction of the starting material of the formula IV thus obtained in which X is chlorine can be carried out with an aniline derivative of the formula V in the same vessel, i.e. as a one-pot reaction. For this purpose, after the reaction with phosphorus oxychloride is complete, the reaction mixture is evaporated to dryness, suspended using a suitable solvent, such as n-butanol, and reacted further with the aniline derivative of the formula V.

A compound analogous to formula IV in which X is hydroxyl is obtained, for example, from a compound of the formula XV

in which the symbols are as defined above, by reaction with formic acid which is preferably employed in excess relative to the compound of the formula XV, for example in a 10 to 30 molar excess, where appropriate in the presence of inert solvents, such as dimethylformamide, at elevated temperature, for example at temperatures from 80°C to the boiling temperature.

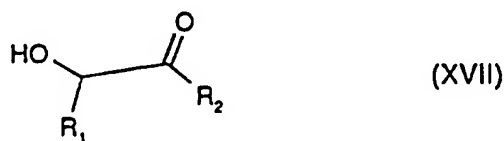

Alternatively, a compound analogous to formula IV in which X is hydroxyl and the other symbols are as defined above is obtained, for example, from a compound of the formula XVI

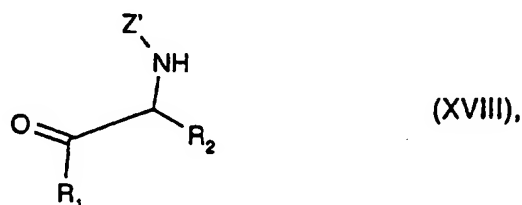

in which R_{19} is lower alkyl, such as especially ethyl, and the other symbols are as defined above, by reaction with a large excess of formamide in a mixture of anhydrous dimethylformamide and formic acid. The reaction is carried out at elevated temperature, for example at from 100°C to 150°C, and preferably under protective gas.

The present invention also relates to the novel starting materials of the formulae XV and XVI.

The 1-(Z')-2-amino-3-cyanopyrroles of the formula XV used as intermediates can be prepared in good yields by methods that are known per se and have been published [see, for example, Roth, H.J., and Eger, K., Arch. Pharmaz. 308, 179 (1975)]. For this purpose, for example, a compound of the formula XVII

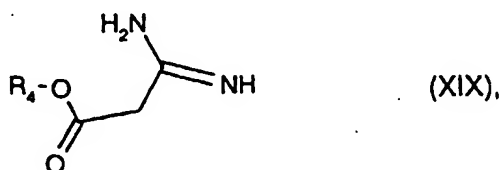

is reacted first with an amine of the formula $Z'-NH_2$ to give a compound of the formula XVIII

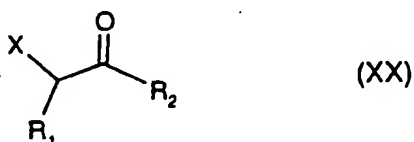

which is then converted with malononitrile of the formula $CH_2(CN)_2$ into the desired intermediate of the formula XV. In detail, the reaction with the amine $Z'-NH_2$ is carried

out under customary condensation conditions, for example in the presence of catalytic amounts of a strong acid, for example hydrochloric acid or p-toluenesulfonic acid, at elevated temperature (preferably at boiling heat) in a suitable solvent, for example benzene or toluene, with separation of water, to give the respective α -amino ketone of the formula XVIII. The latter is not isolated but is immediately condensed with malononitrile with heating and with further separation of water, if necessary with the addition of a small amount of a base, such as piperidine, a compound of the formula XV being obtained.

The compounds of the formula XVI used as intermediates are obtained, for example, by reacting a 2-amidinoacetic acid lower alkyl ester of the formula XIX

wherein R_1 is as defined above, with a 2-X-1- R_2 -ethan-1-one derivative of the formula XX

in which the symbols are as defined above. The leaving group X is preferably bromine. The 2-amidinoacetic acid lower alkyl ester of the formula XIX is liberated from its acid addition salt, such as especially its hydrochloride, before the start of the reaction with the aid of equimolar amounts of a base, such as especially sodium ethoxide, with ice-cooling. The reaction is carried out in a suitable solvent, such as especially a lower alkanol, such as preferably ethanol, at preferred temperatures of from 0°C to 50°C, especially at room temperature.

A starting compound of the formula I in which one of the radicals R_1 and R_2 is formyl, carboxyl, lower alkoxycarbonyl, cyano, carbamoyl, thiocarbamoyl, aminophenyl or tetrazol-5-yl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, are obtained as explained in an exemplary manner in the examples section. A person skilled in the art can transfer the specific exemplified reactions without major effort to compounds having other radicals R and R_1 or R_2 than those which are specifically exemplified, provided that free functional groups present in the radical R are protected by easily removable protective groups, if necessary, that is if these interfere with the desired reaction. In many cases, especially if, for example, R is halogen, no protection is necessary.

General process conditions:

Free compounds of the formula I having salt-forming properties that are obtainable according to the process can be converted into their salts in a manner known per se, for example by treating with acids or suitable derivatives thereof, for example by addition of the appropriate acid to the compound of the formula I dissolved in a suitable solvent, for example an ether, such as a cyclic ether, especially dioxane or in particular tetrahydrofuran.

Mixtures of isomers obtainable according to the invention can be separated into the individual isomers in a manner known per se; racemates can be separated, for example, by forming salts with optically pure salt-forming reagents and separating the mixture of diastereomers thus obtainable, for example by means of fractional crystallization.

The reactions described above can be carried out under reaction conditions known per se, in the absence or, customarily, the presence of solvents or diluents, preferably those that are inert towards the reagents used and are solvents therefor, in the absence or presence of catalysts, condensing agents (for example phosphorus pentoxide) or neutralizing agents, for example bases, especially nitrogen bases, such as triethylamine hydrochloride, depending on the nature of the reaction and/or of the reactants at reduced, normal or elevated temperature, for example in a temperature range from approximately -80°C to approximately 200°C , preferably from

approximately -20°C to approximately 150°C, for example at the boiling point of the solvent used, under atmospheric pressure or in a closed vessel, where appropriate under pressure, and/or in an inert atmosphere, for example under a nitrogen atmosphere.

The specific reaction conditions given in each case are preferred.

Solvents and diluents are, for example, water, alcohols, for example lower alkyl hydroxides, such as methanol, ethanol, propanol or especially butanol, diols, such as ethylene glycol, triols, such as glycerol, or aryl alcohols, such as phenol, acid amides, for example carboxylic acid amides, such as dimethylformamide, dimethylacetamide or 1,3-dimethyl-3,4,5,6-tetrahydro-2(1H)-pyrimidinone (DMPU), carboxylic acids, especially formic acid or acetic acid, amides of inorganic acids, such as hexamethylphosphoric acid triamide, ethers, for example cyclic ethers, such as tetrahydrofuran or dioxane, or acyclic ethers, such as diethyl ether or ethylene glycol dimethyl ether, halogenated hydrocarbons, such as halo-lower alkanes, for example methylene chloride or chloroform, ketones, such as acetone, nitriles, such as acetonitrile, acid anhydrides, such as acetic anhydride, esters, such as ethyl acetate, bis-alkanesulfines, such as dimethyl sulfoxide, nitrogen-containing heterocyclic compounds, such as pyridine, hydrocarbons, for example lower alkanes, such as heptane, or aromatic compounds, such as benzene, toluene or xylene(s), or mixtures of these solvents, it being possible for the solvents suitable in each case for the abovementioned reactions to be selected.

Customary processes are used for working up the obtainable compounds of the formula I or their salts, for example solvolysis of excess reagents; recrystallizing; chromatographing, for example partition, ion or gel chromatography; partitioning between inorganic and organic solvent phases; single or multiple extraction, especially after acidifying or increasing the basicity or the salt content; drying over hygroscopic salts; digesting; filtering; washing; dissolving; evaporating (if necessary in vacuo or under a high vacuum); distillation; crystallization, for example of compounds obtained in oil form or from the mother liquor, seeding with a crystal of the end product also being possible; or a combination of two or more of the working-up steps mentioned, which can also be employed repeatedly, etc.

Starting materials and intermediates can be used in pure form, for example after working-up, as just mentioned, in partly purified form or alternatively, for example, directly as a crude product.

The compounds, including their salts, may also be obtained in the form of hydrates, or their crystals may include, for example, the solvent used for crystallization. The present invention also relates to these hydrates or solvates of the compounds of the formula I, and to the starting materials described as belonging to the subject matter of the invention.

In view of the close relationship between the compounds of the formula I in free form and in the form of their salts, hereinabove and hereinbelow the free compounds and their salts are to be understood as meaning also the corresponding salts and free compounds, respectively, as appropriate and expedient, provided that the compounds contain salt-forming groups. The same applies to the hydrates and solvates.

In the process of the present invention, the starting materials employed are preferably those that lead to the novel compounds of the formula I described at the beginning as being especially valuable.

The invention also relates to those forms of the process in which a compound obtainable as an intermediate at any stage of the process is used as a starting material and the remaining process steps are carried out or in which a starting material is formed under the reaction conditions or is used in the form of a derivative, for example a salt thereof.

Pharmaceutical compositions, their preparation and the use according to the invention of the compounds of the formula I and of compositions comprising these compounds as active ingredient

The present invention also relates to pharmaceutical compositions that comprise one of the compounds of the formula I as active ingredient and that can be used especially for the treatment of the diseases mentioned at the beginning. Compositions for enteral administration, such as nasal, buccal, rectal or, especially, oral administration, and for parenteral administration, such as intravenous, intramuscular or subcutaneous administration, to warm-blooded animals, especially humans, are especially preferred. The

compositions comprise the active ingredient on its own or, preferably, together with a pharmaceutically acceptable carrier. The dosage of the active ingredient depends upon the disease to be treated and upon the species, its age, weight and individual condition, the individual pharmacokinetic data, the disease to be treated and also upon the mode of administration.

The invention also relates to pharmaceutical compositions for use in a method for the therapeutic treatment of the human or animal body, to a process for the preparation thereof (especially as compositions for the treatment of tumours) and to a method of treating neoplastic diseases, especially those mentioned above.

A pharmaceutical composition is preferred which is suitable for administration to a warm-blooded animal, especially a human, suffering from a disease that is responsive to inhibition of a protein kinase, for example psoriasis or a tumour, comprising a compound of the formula I, or a salt thereof if salt-forming groups are present, in an amount effective for the inhibition of the protein kinase, together with at least one pharmaceutically acceptable carrier.

The pharmaceutical compositions comprise from approximately 1 % to approximately 95 % of the active ingredient, administration forms in single dose form preferably comprising from approximately 20 % to approximately 90 % of active ingredient and administration forms that are not in single dose form preferably comprising from approximately 5 % to approximately 20 % of active ingredient. Unit dose forms are, for example, sugar-coated tablets, tablets, ampoules, vials, suppositories or capsules. Other administration forms are, for example, ointments, creams, pastes, foams, tinctures, lipsticks, drops, sprays, dispersions, etc. Examples are capsules, comprising from approximately 0.05 g to approximately 1.0 g of the active ingredient.

The pharmaceutical compositions of the present invention are prepared in a manner known per se, for example by means of conventional mixing, granulating, sugar-coating, dissolving or lyophilizing processes.

Solutions of the active ingredient are preferably used, and also suspensions or dispersions, to be precise especially isotonic aqueous solutions, dispersions or

suspensions which, for example in the case of lyophilized compositions which comprise the active ingredient on its own or together with a carrier, for example mannitol, can be prepared before use. The pharmaceutical compositions may be sterilized and/or may comprise excipients, for example preservatives, stabilizers, wetting agents and/or emulsifiers, solubilizers, salts for regulating the osmotic pressure and/or buffers, and are prepared in a manner known per se, for example by means of conventional dissolving and lyophilizing processes. The solutions or suspensions mentioned may comprise viscosity-increasing substances, such as sodium carboxymethylcellulose, carboxymethylcellulose, dextran, polyvinylpyrrolidone or gelatin.

Suspensions in oil comprise as the oil component the vegetable, synthetic or semi-synthetic oils customary for injection purposes. There may be mentioned as such especially liquid fatty acid esters that contain as the acid component a long-chain fatty acid having 8-22, especially 12-22, carbon atoms, for example lauric acid, tridecylic acid, myristic acid, pentadecylic acid, palmitic acid, margaric acid, stearic acid, arachidic acid, behenic acid or corresponding unsaturated acids, for example oleic acid, elaidic acid, erucic acid, brassidic acid or linoleic acid, if desired with the addition of antioxidants, for example vitamin E, β -carotene or 3,5-di-tert-butyl-4-hydroxytoluene. The alcohol component of these fatty acid esters has a maximum of 6 carbon atoms and is a mono- or polyhydric, for example a mono-, di- or trihydric, alcohol, for example methanol, ethanol, propanol, butanol or pentanol or their isomers, but especially glycol and glycerol. The following examples of fatty acid esters are therefore to be mentioned: ethyl oleate, isopropyl myristate, isopropyl palmitate, "Labrafil M 2375" (polyoxyethylene glycerol trioleate, Gattefossé, Paris), "Labrafil M 1944 CS" (unsaturated polyglycolized glycerides prepared by alcoholysis of apricot kernel oil and consisting of glycerides and polyethylene glycol ester, Gattefossé, France), "Labrasol" (saturated polyglycolized glycerides prepared by alcoholysis of TCM and consisting of glycerides and polyethylene glycol ester, Gattefossé, France) and/or "Miglyol 812" (triglyceride of saturated fatty acids with a chain length of C₈ to C₁₂, Hüls AG, Germany), but especially vegetable oils, such as cottonseed oil, almond oil, olive oil, castor oil, sesame oil, soya bean oil and in particular groundnut oil.

The injection compositions are prepared in a customary manner under sterile conditions; the same applies also to dispensing the compositions into ampoules or vials, for example, and sealing the containers.

Pharmaceutical compositions for oral administration can be obtained, for example, by combining the active ingredient with one or more solid carriers, where appropriate granulating a mixture obtained, and, if desired, processing the mixture or granules, where appropriate by addition of additional excipients, to give tablets or sugar-coated tablet cores.

Suitable carriers are especially fillers, such as sugars, for example lactose, sucrose, mannitol or sorbitol, cellulose preparations and/or calcium phosphates, for example tricalcium phosphate or calcium hydrogenphosphate, and also binders, such as starches, for example corn, wheat, rice or potato starch, methylcellulose, hydroxypropylmethylcellulose, sodium carboxymethylcellulose and/or polyvinylpyrrolidone, and/or, if desired, disintegrators, such as the abovementioned starches, also carboxymethyl starch, crosslinked polyvinylpyrrolidone, alginic acid or a salt thereof, such as sodium alginate. Additional adjuncts are primarily flow conditioners and lubricants, for example silicic acid, talc, stearic acid or salts thereof, such as magnesium or calcium stearate, and/or polyethylene glycol, or derivatives thereof.

Sugar-coated tablet cores can be provided with suitable, optionally enteric, coatings, using, inter alia, concentrated sugar solutions which may comprise gum arabic, talc, polyvinylpyrrolidone, polyethylene glycol and/or titanium dioxide, or coating solutions in suitable organic solvents or solvent mixtures, or, for the preparation of enteric coatings, solutions of suitable cellulose preparations, such as acetylcellulose phthalate or hydroxypropylmethylcellulose phthalate. Dyes or pigments may be added to the tablets or sugar-coated tablet coatings, for example for identification purposes or to indicate different doses of active ingredient.

Orally administrable pharmaceutical compositions also include dry-filled capsules consisting of gelatin, and also soft, sealed capsules consisting of gelatin and a plasticizer, such as

glycerol or sorbitol. The dry-filled capsules may contain the active ingredient in the form of granules, for example as a mixture with fillers, such as corn starch, binders and/or glidants, such as talc or magnesium stearate, and, where appropriate, stabilizers. In soft capsules, the active ingredient is preferably dissolved or suspended in suitable liquid excipients, such as fatty oils, paraffin oil or liquid polyethylene glycols or fatty acid esters of ethylene or propylene glycol, to which stabilizers and detergents, for example of the polyoxyethylene sorbitan fatty acid ester type, may also be added.

Other oral administration forms are, for example, syrups prepared in customary manner which comprise the active ingredient, for example in suspended form and in a concentration of about 5 % to 20 %, preferably about 10 %, or in a similar concentration that provides a suitable single dose, for example, when administered in measures of 5 or 10 ml. Also suitable are, for example, powdered or liquid concentrates for the preparation of shakes, for example in milk. Such concentrates may also be packaged in single dose quantities.

Suitable rectally administrable pharmaceutical compositions are, for example, suppositories that consist of a combination of the active ingredient and a suppository base. Suitable suppository bases are, for example, natural or synthetic triglycerides, paraffin hydrocarbons, polyethylene glycols or higher alkanols.

For parenteral administration there are primarily suitable aqueous solutions of an active ingredient in water-soluble form, for example in the form of a water-soluble salt, or aqueous injection suspensions that contain viscosity-increasing substances, for example sodium carboxymethylcellulose, sorbitol and/or dextran, and, if desired, stabilizers. The active ingredient, where appropriate together with adjuncts, can also be in the form of a lyophilizate and can be made into a solution prior to parenteral administration by addition of suitable solvents.

Solutions such as are used, for example, for parenteral administration can also be employed as infusion solutions.

Preferred preservatives are, for example, antioxidants, such as ascorbic acid, or microbicides, such as sorbic acid or benzoic acid.

Ointments are oil-in-water emulsions that contain up to 70 %, but preferably 20 %-50 %, of water or aqueous phase. Suitable as fatty phase are primarily hydrocarbons, for example petroleum jelly, paraffin oil or hard paraffins, which, in order to improve the water-binding capacity, preferably contain suitable hydroxy compounds, such as fatty alcohols or esters thereof, for example cetyl alcohol or wool wax alcohols, such as wool wax. Emulsifiers are appropriate lipophilic substances, such as sorbitan fatty acid esters (Spans), for example sorbitan oleate and/or sorbitan isostearate. Additives to the aqueous phase are, for example, humectants, such as polyalcohols, for example glycerol, propylene glycol, sorbitol and/or polyethylene glycol, and also preservatives and perfumes.

Fatty ointments are anhydrous and contain as base especially hydrocarbons, for example paraffin, petroleum jelly or paraffin oil, also natural or partially synthetic fats, for example coconut fatty acid triglyceride, or preferably hardened oils, for example hydrogenated groundnut oil or castor oil, also fatty acid partial esters of glycerol, for example glycerol mono- and/or distearate, and also, for example, the fatty alcohols increasing the water-absorption, emulsifiers and/or additives mentioned in connection with the ointments.

Creams are oil-in-water emulsions that contain more than 50 % of water. As oily base there are used primarily fatty alcohols, for example lauryl, cetyl or stearyl alcohol, fatty acids, for example palmitic or stearic acid, liquid to solid waxes, for example isopropyl myristate, wool wax or beeswax, and/or hydrocarbons, for example petroleum jelly (petrolatum) or paraffin oil. Suitable emulsifiers are surface-active substances having predominantly hydrophilic properties, such as appropriate non-ionic emulsifiers, for example fatty acid esters of polyalcohols or ethylene oxide adducts thereof, such as polyglycerol fatty acid esters or polyoxyethylene sorbitan fatty acid esters (Tweens), and also polyoxyethylene fatty alcohol ethers or fatty acid esters, or appropriate ionic emulsifiers, such as alkali metal salts of fatty alcohol sulfates, for example sodium lauryl sulfate, sodium cetyl sulfate or sodium stearyl sulfate, which are customarily used in the presence of fatty alcohols, for example cetyl alcohol or stearyl alcohol. Additives to the aqueous phase are, inter alia, agents that reduce the drying out of the creams, for example polyalcohols, such as glycerol, sorbitol, propylene glycol and/or polyethylene glycols, and also preservatives and perfumes.

Pastes are creams and ointments having secretion-absorbing powder constituents, such as metal oxides, for example titanium oxide or zinc oxide, also talc and/or aluminium silicates, the object of which is to bind moisture or secretions present.

Foams are administered from pressurized containers and are liquid oil-in-water emulsions in aerosol form; halogenated hydrocarbons, such as chlorofluoro-lower alkanes, for example dichlorodifluoromethane and dichlorotetrafluoroethane, or preferably non-halogenated gaseous hydrocarbons, air, N₂O or carbon dioxide, are used as propellant gases. As oil phase there are used, inter alia, those used above in the case of ointments and creams, and also the additives mentioned in that connection.

Tinctures and solutions usually have an aqueous-ethanolic base to which there are added, inter alia, polyalcohols, for example glycerol, glycols and/or polyethylene glycol, as humectants for reducing evaporation, and fat-restoring substances, such as fatty acid esters with low molecular weight polyethylene glycols, i.e. lipophilic substances that are soluble in the aqueous mixture, as a replacement for the fatty substances extracted from the skin by the ethanol, and, if necessary, other adjuncts and additives.

The invention also relates to a process or a method of treating the abovementioned pathological conditions, especially those conditions responsive to inhibition of protein kinases. The compounds of the formula I can be administered as such or in the form of pharmaceutical compositions, prophylactically or therapeutically, preferably in an amount effective against the diseases mentioned, to a warm-blooded animal, for example a human, requiring such treatment, the compounds especially being used in the form of pharmaceutical compositions. In the case of a body weight of about 70 kg a daily dose of approximately 0.1 g to approximately 5 g, preferably from approximately 0.5 g to approximately 2 g, of a compound of the present invention is administered.

The following Examples serve to illustrate the invention.

If not mentioned otherwise, the ratio of solvents to one another is given in parts by volume (v/v).

The short forms and abbreviations used have the following definitions:

Eluents (gradients):

HPLC gradients:

Grad₂₀ 20 % → 100 % a) in b) for 20 min.

Eluent a): acetonitrile + 0.05 % TFA; eluent b): water + 0.05 % TFA. Column (250 x 4.6 mm) packed with reversed-phase material C₁₈-Nucleosil® (5 µm average particle size, silica gel covalently derivatized with octadecylsilanes, Macherey & Nagel, Düren, Germany).

Detection by UV absorption at 254 nm. The retention times (t_{Ret}) are given in minutes.

Example 1: 136.4 mg (0.50 mmol) of 4-(3-chloroanilino)-6-formyl-7H-pyrrolo[2,3-d]pyrimidine and 67 μ l of N-methylpiperazine in 5 ml of methanol, 15 ml of DMPU and 63 μ l of acetic acid are hydrogenated at 50°C in the presence of 30 mg of Raney nickel. The catalyst is filtered off, the filtrate is evaporated and the residue is dissolved in ethyl acetate and satd NaHCO₃ solution. The aqueous phase separated off is extracted twice with ethyl acetate; the organic phases are washed with satd NaHCO₃ solution, 4 times with water and brine, dried over Na₂SO₄ and evaporated. Column chromatography (SiO₂, CH₂Cl₂/methanol = 7:2) and stirring in diethyl ether yields 4-(3-chloroanilino)-6-[(4-methylpiperazin-1-yl)methyl]-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{Ret}(\text{Grad}_{20})=7.4$; TLC-R_f = 0.16 (CH₂Cl₂/methanol=7:3); FAB-MS: (M+H)⁺ = 357.

The starting material is obtained as follows:

Stage 1.1: At 0-5°C, 56.0 g (0.43 mol) of ethyl 2-amidinoacetate [for preparation see: *Liebigs Ann. Chem.*, 1561 (1981)] are initially introduced into 172 ml of 1,3-dimethyl-3,4,5,6-tetrahydro-2(1H)-pyrimidinone. 56.0 ml (0.45 mol) of ethyl bromopyruvate are added dropwise in the course of 30 min and the mixture is then warmed to 60°C for 3 h. The dark-brown reaction solution is poured onto 1 litre of ice water and extracted with 1 litre of ethyl acetate and twice with 0.5 litre of ethyl acetate each time. The organic phases are washed 3 times with 0.5 litre of water and 0.5 litre of brine, dried (Na₂SO₄) and evaporated. Column chromatography (SiO₂, hexane/ethyl acetate [1:1]) and crystallization from diethyl ether-hexane yields 2-amino-3,5-bis(ethoxycarbonyl)-1H-pyrrole; m.p. 147-149°C; MS: (M)⁺ = 226.

Stage 1.2: With the exclusion of air, 51.5 g (227 mmol) of 2-amino-3,5-bis-(ethoxycarbonyl)-1H-pyrrole, 455 mmol of formamide, 227 ml of DMF and 113 ml of formic acid are stirred at 140°C for 27 h. The resulting yellow suspension is cooled to 0-5°C. Filtering and washing with isopropanol and hexane leads to 6-ethoxycarbonyl-4-hydroxy-7H-pyrrolo[2,3-d]pyrimidine; ¹H-NMR (DMSO-d₆): 13.12 (2 HX), 7.99 and 7.11 (2s, 2H), 4.31 (q, J=7, 2H), 1.32 (t, J=7, 3H).

Stage 1.3: Under an N₂ atmosphere, 32.0 g (154 mmol) of 6-ethoxycarbonyl-4-hydroxy-7H-pyrrolo[2,3-d]pyrimidine are suspended in 308 ml (338 mmol) of POCl₃ at RT and warmed to 120°C with stirring; the solid dissolves in the course of this. After stirring at 120°C for 3 h, the excess POCl₃ is distilled off (65°C external temperature; 15 mbar). Suspension of the residue in 50 ml of ice-cold toluene, filtration and washing with toluene yields 4-chloro-6-ethoxycarbonyl-7H-pyrrolo[2,3-d]pyrimidine; m.p. 219-221°C; ¹H-NMR (DMSO-d₆) 8.77 and 7.24 (2s, 2H), 4.39 (q, J=7, 2H), 1.36 (t, J=7, 3H). Further product can be obtained from the evaporated filtrate by stirring in ethyl acetate/water.

Stage 1.4: Under an argon atmosphere, 29.0 g (128 mmol) of 4-chloro-6-ethoxycarbonyl-7H-pyrrolo[2,3-d]pyrimidine and 18.0 ml (171 mmol) of 3-chloroaniline in 430 ml of n-butanol are stirred at 100°C for 3 h (almost dissolved after ≈ 1 h, then a thick suspension is formed). 400 ml of isopropanol/hexane (1:1) are then added to the reaction mixture cooled to ≈ 50°C, and the product is filtered off and washed with isopropanol and hexane. Stirring in diethyl ether yields 4-(3-chloroanilino)-6-ethoxycarbonyl-7H-pyrrolo[2,3-d]pyrimidine; ¹H-NMR (DMSO-d₆) 13.0 and 10.53 (2 sb, 2HN), 8.48 (s, 1H), 8.13 (m, 1H), 7.78 (dm, J=8, 1H), 7.76 (s, 1H), 7.45 (t, J=8, 1H), 7.21 (dm, J=8, 1H), 4.37 (q, J=7, 2H), 1.37 (t, J=7, 3H).

Stage 1.5: Under an N₂ atmosphere, 1.4 g (37 mmol) of lithium aluminium hydride are added in portions to 5.70 g (18 mmol) of 4-(3-chloroanilino)-6-ethoxycarbonyl-7H-pyrrolo[2,3-d]pyrimidine. After stirring at 50°C for 2 h, 100 ml of water are added dropwise to the reaction mixture and it is filtered through Celite. Water is added to the filtrate and the mixture is extracted 3 times with ethyl acetate. The organic phases are washed 3 times with water and brine, dried (MgSO₄) and evaporated. Recrystallization

from isopropanol yields 4-(3-chloroanilino)-6-hydroxymethyl-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 8.2$; TLC- $R_f = 0.11$ ($\text{CH}_2\text{Cl}_2/\text{methanol}$ [10:1]); MS: $(\text{M})^+ = 274$.

Stage 1.6: With ice-cooling, 1.9 g of manganese dioxide (85%) are added to a suspension of 715 mg (2.6 mmol) of 4-(3-chloroanilino)-6-hydroxymethyl-7H-pyrrolo[2,3-d]pyrimidine in 170 ml of methylene chloride and the mixture is stirred at RT for 20 h. 20 ml of 1,3-dimethyl-3,4,5,6-tetrahydro-2(1H)-pyrimidinone (DMPU) are then added to the reaction mixture, and it is stirred for 1 h and then filtered through Hyflo. The filtration residue is again stirred (1h) in 50 ml of methylene chloride/DMPU (1:1) and again filtered. The two filtrates are combined, evaporated and taken up in ethyl acetate/THF and water. The aqueous phases are extracted twice with ethyl acetate; the organic phases are washed 4 times with water and brine, dried (MgSO_4) and evaporated down to a residual volume of ≈ 20 ml. Addition of diethyl ether and filtration yields 4-(3-chloroanilino)-6-formyl-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 10.1$; TLC- $R_f = 0.24$ ($\text{CH}_2\text{Cl}_2/\text{methanol}$ [10:1]).

Example 2: 109 mg (0.40 mmol) of 4-(3-chloroanilino)-6-formyl-7H-pyrrolo[2,3-d]pyrimidine (stage 1.6) and 70 μl (0.8 mmol) of morpholine in 6 ml of methanol, 2 ml of DMPU and 50 μl of acetic acid are heated at 50°C for 2 h. 30 mg of Raney nickel are then added and the mixture is hydrogenated at 50°C . The catalyst is filtered off, the filtrate is evaporated and the residue is dissolved in ethyl acetate and satd Na_2CO_3 solution. The aqueous phase separated off is extracted twice with ethyl acetate; the organic phases are washed with satd NaHCO_3 solution, twice with water and brine, dried (MgSO_4) and evaporated. The residue is taken up in methanol, and the solution is treated with silica gel and dried. The powder is added to a silica gel column and eluted with $\text{CH}_2\text{Cl}_2/\text{methanol} = 10:1$. Crystallization from ethyl acetate/diethyl ether/hexane yields 4-(3-chloroanilino)-6-[(morpholin-4-yl)-methyl]-7H-pyrrolo[2,3-d]pyrimidine; m.p: $244\text{--}246^\circ\text{C}$; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 7.4$; TLC- $R_f = 0.20$ ($\text{CH}_2\text{Cl}_2/\text{methanol}$ 10:1); FAB-MS: $(\text{M}+\text{H})^+ = 344$.

Example 3: 109 mg (0.40 mmol) of 4-(3-chloroanilino)-6-formyl-7H-pyrrolo[2,3-d]pyrimidine (stage 1.6) and 84 mg (0.8 mmol) of diethanolamine in 6 ml of ethanol, 60 drops of DMPU and 50 μl of acetic acid are stirred at RT for a few hours. 30 mg of Raney nickel are then added and the mixture is hydrogenated at 50°C . The catalyst is

filtered off and the filtrate is evaporated. Column chromatography (SiO_2 , $\text{CH}_2\text{Cl}_2/\text{methanol} = 10:1$) and crystallization from ethyl acetate/diethyl ether yields 4-(3-chloroanilino)-6-[bis(2-hydroxyethyl)aminomethyl]-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 7.0$; TLC- $R_f = 0.1$ ($\text{CH}_2\text{Cl}_2/\text{methanol} = 10:1$); FAB-MS: $(\text{M}+\text{H})^+ = 362$.

Example 4: 273 mg (1.00 mmol) of 4-(3-chloroanilino)-6-formyl-7H-pyrrolo[2,3-d]pyrimidine (stage 1.6) and 156 ml (1.2 mmol) of 4-methoxybenzylamine in 10 ml of methanol, DMPU and 126 μl (2.2 mmol) of acetic acid are stirred at RT for 1 h. 0.1 g of Raney nickel is then added and the mixture is hydrogenated at RT and finally at 50°C . The catalyst is filtered off, the filtrate is evaporated and the residue is dissolved in ethyl acetate and satd Na_2CO_3 solution. The aqueous phase separated off is extracted twice with ethyl acetate; the organic phases are washed with satd NaHCO_3 solution, and twice with water and brine, dried (MgSO_4) and evaporated. Stirring the residue in diethyl ether yields 4-(3-chloroanilino)-6-[(4-methoxybenzylamino)-methyl]-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 9.5$; TLC- $R_f = 0.17$ ($\text{CH}_2\text{Cl}_2/\text{methanol} = 10:1$); FAB-MS: $(\text{M}+\text{H})^+ = 394$.

Example 5: Under an N_2 atmosphere, 29 μl (0.3 mmol) of boron tribromide in 2 ml of methylene chloride are added to an ice-cooled suspension of 98.5 mg (0.25 mmol) of 4-(3-chloroanilino)-6-[(4-methoxy-benzylamino)-methyl]-7H-pyrrolo[2,3-d]pyrimidine (see Example 4) in 5 ml of abs. methylene chloride. After 3 h, a further 60 μl of boron tribromide are added and the mixture is stirred at RT overnight. The reaction mixture is poured onto ice water and extracted 3 times with ethyl acetate. The organic phases are washed with satd NaHCO_3 solution, twice with water and brine, dried (MgSO_4) and evaporated. Stirring in hot isopropanol affords 4-(3-chloroanilino)-6-[(4-hydroxy-benzylamino)methyl]-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 8.4$; FAB-MS: $(\text{M}+\text{H})^+ = 380$.

Example 6: 115 mg (1.66 mmol) of hydroxylammonium chloride and 139 mg (1.69 mmol) of sodium acetate in 2 ml of water are added to 273 mg (1.00 mmol) of 4-(3-chloroanilino)-6-formyl-7H-pyrrolo[2,3-d]pyrimidine (stage 1.6) in 3 ml of methanol. The suspension is heated to boiling for 3 h, cooled and filtered, and the residue is washed with water/isopropanol = 1:1. The crude product is dissolved in about 80 ml of hot THF and clarified with active carbon. 10 ml of isopropanol are added to the filtrate

and it is partially evaporated. The crystals formed in this process are filtered off and washed with DIPE and hexane, whereupon pure (E)-4-(3-chloroanilino)-7H-pyrrolo-[2,3-d]pyrimidine-6-carbaldehyde oxime is obtained; $^1\text{H-NMR}$ (DMSO-d_6): 12.16 and 11.35 (2s, 2HN), 9.60 (s, 1H), 8.35 (s, 1H), 8.19 (sb, 1H), 8.17 (s, 1H), 7.79 (db, J=8, 1H), 7.35 (t, J=8, 1H), 7.05 (db, J=8, 1H), 7.03 (s, 1H); HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 9.5$; FAB-MS: $(\text{M}+\text{H})^+ = 288$.

After addition of diethyl ether and allowing to stand at -20°C , (Z)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine-6-carbaldehyde oxime crystallizes from the evaporated mother liquor as a mixture with $\approx 10\%$ of the (E) isomer: $^1\text{H-NMR}$ (DMSO-d_6): 12.00 (s, 2HN), 9.71 (s, 1H), 8.39 (s, 1H), 8.24 (sb, 1H), 7.84 (db, J=8, 1H), 7.67 (s, 1H), 7.52 (s, 1H), 7.35 (t, J=8, 1H), 7.05 (db, J=8, 1H); HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 9.1$; FAB-MS: $(\text{M}+\text{H})^+ = 288$.

Example 7: 69.3 mg (0.83 mmol) of O-methylhydroxylamine hydrochloride and 69.3 mg (0.845 mmol) of sodium acetate in 1 ml of water are added to 163.3 mg (0.5 mmol) of 4-(3-chloroanilino)-6-formyl-7H-pyrrolo[2,3-d]pyrimidine (stage1.6) in 1 ml of methanol. The suspension is heated to boiling for 4 h, cooled and filtered, and the residue is washed with water/isopropanol and finally diethyl ether. 4-(3-Chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine-6-carbaldehyde O-methyl oxime is obtained; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 11.3$; TLC- $R_f = 0.31$ ($\text{CH}_2\text{Cl}_2/\text{methanol}$ 10:1) FAB-MS: $(\text{M}+\text{H})^+ = 302$.

Example 8: 168.5 mg (0.53 mmol) of 4-(3-chloroanilino)-6-ethoxycarbonyl-7H-pyrrolo[2,3-d]pyrimidine (stage1.4) in 3 ml of morpholine are stirred at 50°C for 5 days and at 100°C for 1 day. Silica gel is added to the reaction mixture, it is evaporated, and the resulting powder is applied to a silica gel column and eluted with ethanol/methylene chloride 1:15. Stirring the reaction product in isopropanol leads to 4-(3-chloroanilino)-6-(morpholin-4-yl-carbonyl)-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 9.2$; TLC- $R_f = 0.56$ ($\text{CH}_2\text{Cl}_2/\text{methanol} = 10:1$); MS: $(\text{M})^+ = 357$.

Example 9: 98 mg (0.33 mmol) of TPTU, followed by 133 μl (1.2 mmol) of N-methyl-piperazine in 1 ml of DMF (\rightarrow solution) are added to a suspension of 97.6 mg (0.30 mmol) of 6-carboxy-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine in 7 ml of DMF. After 1 h, a further 30 mg of TPTU are added and the mixture is stirred overnight at RT. The reaction mixture is evaporated in an HV, and the residue is treated with

ethanol/methylene chloride (1:2) and finally with about 4 ml of ethanol/water (3:1). 4-(3-chloroanilino)-6-[(4-methylpiperazin-1-yl)carbonyl]-7H-pyrrolo[2,3-d]pyrimidine crystallizes in this process and is filtered off and washed with ethanol/water (1:1) and isopropanol/hexane (1:1); m.p. 276-278°C; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 7.3$; TLC- $R_f = 0.21$ ($\text{CH}_2\text{Cl}_2/\text{ethanol} = 2:1$); MS: $(M)^+ = 370$.

The starting material is obtained as follows:

Step 9.1: A solution of 25 mg (0.6 mmol) of $\text{LiOH} \cdot \text{H}_2\text{O}$ in 0.4 ml of H_2O is added dropwise to a suspension of 95 mg (0.30 mmol) of 4-(3-chloroanilino)-6-ethoxycarbonyl-7H-pyrrolo[2,3-d]pyrimidine (see stage 1.4) in 0.7 ml of methanol and the mixture is heated to boiling for 4.5 h. It is cooled in an ice bath and acidified with 0.6 ml of 1 normal HCl solution. Filtering off and washing with water yields 6-carboxy-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 8.7$; FAB-MS: $(M+H)^+ = 289$.

Example 10: 144 mg (0.50 mmol) of 6-aminocarbonyl-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine and 202 mg (0.5 mmol) of Lawesson's reagent in 5 ml of THF are heated to boiling for 17 h and the mixture is then evaporated. Column chromatography (SiO_2 , $\text{CH}_2\text{Cl}_2/\text{ethanol} = 15:1$) of the residue and stirring in diethyl ether yields 4-(3-chloroanilino)-6-(thiocarbamoyl)-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 9.8$; TLC- $R_f = 0.44$ ($\text{CH}_2\text{Cl}_2/\text{methanol} = 10:1$); FAB-MS: $(M+H)^+ = 304$; IR: (KBr) inter alia 1614s, 1566s, 1506m, 1474s, 1380m, 1354m, 1294m, 1134m.

The starting material is obtained as follows:

Stage 10.1: 90 mg (0.285 mmol) of 4-(3-chloroanilino)-6-ethoxycarbonyl-7H-pyrrolo[2,3-d]pyrimidine (stage 1.4) in 30 ml of methanol and ≈ 5 g of ammonia are heated at 120°C for 48 h in an autoclave. The reaction mixture is treated with silica gel, evaporated, applied to a silica gel column as a powder and finally eluted with methylene chloride/methanol/THF (210:35:10). Filtration with methanol through an alumina column (basic) and stirring in ethyl acetate yields 6-aminocarbonyl-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 8.1$; TLC- $R_f = 0.18$ ($\text{CH}_2\text{Cl}_2/\text{methanol} [10:1]$); high resolution MS: $(M+H)^+ = 288.0669$ (calc. 288.0652).

The starting material is obtained alternatively and advantageously as follows:

Alternative stage 10.1: A mixture of 2.165 g (7.5 mmol) of 6-carboxy-4-(3-chloro-anilino)-7H-pyrrolo[2,3-d]pyrimidine in 60 ml of THF and 10 ml of DMPU is heated under reflux for 30 min and then cooled to 0°C, whereupon a fine suspension is obtained. 824 µl (7.5 mmol) of N-methylmorpholine followed by 981 µl (7.5 mmol) of isobutyl chloroformate in 10 ml of THF and, after 1 h at 0°C, 824 µl (7.5 mmol) of N-methylmorpholine followed by 981 µl (7.5 mmol) of isobutyl chloroformate again are added dropwise. The mixture is stirred for 1 h and then added dropwise to 70 ml of a saturated solution of ammonia in dioxane. After 3 h, the mixture is concentrated in vacuo. The residue is poured into water, and the precipitate is filtered off and washed with water and boiling isopropanol, whereupon 6-aminocarbonyl-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine is obtained. Further product is obtained from the isopropanol filtrate.

Example 11: 57.5 mg (0.19 mmol) of 4-(3-chloroanilino)-6-(thiocarbamoyl)-7H-pyrrolo[2,3-d]pyrimidine (see Example 10) in 3 ml of methanol and 57.3 mg (0.25 mmol) of 4-methoxyphenacyl bromide are heated to boiling for 17 h. Cooling of the pale yellow suspension, filtering and washing with isopropanol/diethyl ether yields 4-(3-chloroanilino)-6-[4-(4-methoxyphenyl)thiazol-2-yl]-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 15.4$; TLC- $R_f = 0.33$ ($\text{CH}_2\text{Cl}_2/\text{methanol} = 10:1$); FAB-MS: $(\text{M}+\text{H})^+ = 434$.

Example 12: 57.5 mg (0.19 mmol) of 4-(3-chloroanilino)-6-(thiocarbamoyl)-7H-pyrrolo[2,3-d]pyrimidine (see Example 10) and 34 ml of 1-bromo-2-butanone (Aldrich; Milwaukee/USA) in 3 ml of dioxane are heated to boiling for 2 h. Cooling, filtering the suspension and washing with isopropanol/diethyl ether yields 4-(3-chloroanilino)-6-(4-ethylthiazol-2-yl)-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{\text{Ret}}(\text{Grad}_{20}) = 13.6$; FAB-MS: $(\text{M}+\text{H})^+ = 356$.

Example 13: 4-(3-Chloroanilino)-6-(4,5-dimethylthiazol-2-yl)-7H-pyrrolo[2,3-d]pyrimidine is obtained by the process described in this text.

Example 14: 19 mg (0.45 mmol) of lithium chloride and 19.5 mg (0.30 mmol) of sodium azide are added to a solution of 80.9 mg (0.30 mmol) of 4-(3-chloroanilino)-6-cyano-7H-pyrrolo[2,3-d]pyrimidine in 1 ml of methoxyethanol and the mixture is heated to boiling for 6.5 h. The cooled reaction mixture is poured onto water/HCl (conc.) 10:1, the mixture is stirred for 30 min, and the solid is filtered off and washed with water. Dissolving the crystals in THF/isopropanol, partial evaporation to crystallization, filtering off and washing with diethyl ether affords 4-(3-chloroanilino)-6-(tetrazol-5-yl)-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{Ret}(\text{Grad}_{20}) = 9.5$; TLC- $R_f = 0.45$ ($\text{CH}_2\text{Cl}_2/\text{methanol} = 7:1$); FAB-MS: $(M+H)^+ = 313$.

The starting material is obtained as follows:

Stage 14.1: 13 ml of phosphorus oxychloride are added to 1.048 g (3.6 mmol) of 6-aminocarbonyl-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine (see Stage 10.1) and 0.7 ml of N,N-dimethylacetamide. After stirring at RT for 1 h and at 100°C for 4 h, the reaction mixture is poured into an ice-cooled saturated solution of NaHCO_3 . Extraction with ethyl acetate (3 times), washing the organic layers with saturated NaHCO_3 solution, water and saturated sodium chloride solution, drying (Na_2SO_4) and concentrating leads to a solid. Column chromatography (SiO_2 ; ethyl acetate), and stirring the crude product in diethyl ether and hexane yields 4-(3-chloroanilino)-6-cyano-7H-pyrrolo[2,3-d]pyrimidine; m.p. 284-287°C; TLC- $R_f = 0.71$ ($\text{CH}_2\text{Cl}_2/\text{methanol} [10:1]$); HPLC: $t_{Ret}(\text{Grad}_{20}) = 11.8$.

Example 15: 50.4 mg (0.60 mmol) of NaHCO_3 and, at 0-5°C, 600 μl (0.60 mmol) of methyl iodide (1 M in dioxane) are added to 187.6 mg (0.60 mmol) of 4-(3-chloroanilino)-6-(tetrazol-5-yl)-7H-pyrrolo[2,3-d]pyrimidine (see Example 14) in 12 ml of DMF. After stirring at RT for 18 h, the mixture is diluted with ethyl acetate, a little THF and water, and the aqueous phase is separated off and extracted again with ethyl acetate and a little THF. The organic phases are washed twice with water and brine, dried with MgSO_4 and evaporated. Stirring the residue in THF/ethanol affords a 2:1 mixture of 4-(3-chloroanilino)-6-(2-methyltetrazol-5-yl)-7H-pyrrolo[2,3-d]pyrimidine and 4-(3-chloroanilino)-6-(1-methyltetrazol-5-yl)-7H-pyrrolo[2,3-d]pyrimidine; HPLC: $t_{Ret}(\text{Grad}_{20}) = 10.5$ (1 part) and 10.7 (2 parts), $^1\text{H-NMR}$ (DMSO-d_6) inter alia 4.45 (s, 2- H_3C -tetrazole), 4.32 (s, 1- H_3C -tetrazole); FAB-MS: $(M+H)^+ = 327$.

Example 16: 0.1 g (0.304 mmol) of (R)-6-(4-aminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine and 0.026 ml (0.33 mmol) of methanesulfochloride in 1 ml of abs. dimethylacetamide are stirred at 0°C for 4 h until starting material is no longer present in the TLC. The reaction mixture is poured onto 10 ml of ice water. It is extracted with ethyl acetate and 20 ml of an aqueous NaHCO₃ solution. The organic phase is washed with water, dried and concentrated, (R)-6-(4-methylsulfonylamino-phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine crystallizing out. The product is washed with hexane; m.p. 253-256°C; FAB-MS: (M+H)⁺ = 408.

The starting material is obtained as follows:

Stage 16.1: Analogously to stage 19.4, boiling 6.0 g (220 mmol) of 4-chloro-6-(4-nitrophenyl)-7H-pyrrolo[2,3-d]pyrimidine (see Stage 19.3) with 6.04 g of (R)-(+)-1-phenylethylamine in 120 ml of n-butanol gives (R)-6-(4-nitrophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine as rust-brown crystals of m.p. >250°C.

Stage 16.2: Analogously to stage 19.5, reduction of (R)-6-(4-nitrophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine with Raney nickel in THF/methanol gives (R)-6-(4-aminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine; m.p. 234-235°C; MS: M⁺ = 329.

Example 17: Analogously to Example 16, the following are prepared from (R)-6-(4-aminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine (see stage 16.2) and the appropriate alkyl sulfochloride:

- a) (R)-6-(4-ethylsulfonylamino-phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine; m.p. 260-261°C; FAB-MS: (M+H)⁺ = 422, and
- b) (R)-6-(4-isopropylsulfonylamino-phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine; m.p. 262-263°C; FAB-MS: (M+H)⁺ = 436.

Example 18: Analogously to Example 16, the following are prepared from (R)-6-(3-aminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine and the appropriate alkyl sulfochloride:

- a) (R)-6-(3-methylsulfonylaminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]-pyrimidine; m.p. 139-148°C (amorphous); MS: (M^+) = 407,
- b) (R)-6-(3-ethylsulfonylaminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]-pyrimidine; m.p. 235-236°C; FAB-MS: ($M+H$)⁺ = 422, and
- c) (R)-6-(3-isopropylsulfonylaminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]-pyrimidine; m.p. 257-258°C; FAB-MS: ($M+H$)⁺ = 436.

The starting material is obtained as follows:

Stage 18.1: Analogously to the method described in stage 19.4, boiling 20.0 g (700 mmol) of 4-chloro-6-(3-nitrophenyl)-7H-pyrrolo[2,3-d]pyrimidine (prepared analogously to stages 19.1 to 19.3) with 23.1 ml (168 mmol) of (R)-phenylethylamine in 23.1 ml of n-butanol gives (R)-6-(3-nitrophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine as rust-brown crystals of m.p. >250°C; MS: M^+ = 359.

Stage 18.2: Analogously to stage 19.5, reduction of (R)-6-(3-nitrophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine with Raney nickel in THF/methanol gives (R)-6-(3-aminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine; m.p. 129-190°C (amorphous); MS: M^+ = 329.

Example 19: Analogously to Example 16, the following are prepared from 6-(4-amino-phenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine and the corresponding alkyl sulfochloride:

- a) 6-(4-methylsulfonylaminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine; m.p. >300°C; FAB-MS: ($M+H$)⁺ = 414,
- b) 4-(3-chloroanilino)-6-(4-ethylsulfonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. >300°C; FAB-MS: ($M+H$)⁺ = 428,
- c) 4-(3-chloroanilino)-6-(4-isopropylsulfonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. >300°C; FAB-MS: ($M+H$)⁺ = 442 and
- d) 4-(3-chloroanilino)-6-(4-phenylsulfonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. >300°C; FAB-MS: ($M+H$)⁺ = 475.

The starting material is obtained as follows:

Stage 19.1: In a dry three-necked flask, 75 ml of abs. ethanol and 6.5 g (390 mmol) of ethyl 2-amidinoacetate hydrochloride [for preparation see: *Liebigs Ann. Chem.*, 1895 (1977)] are initially introduced under argon, and the mixture is cooled to 0-5°C and treated with 2.65 g (390 mmol) of sodium ethoxide. 5 g (195 mmol) of 2-bromo-1-(4-nitrophenyl)ethan-1-one are then added, and the mixture is allowed to come to RT and is stirred further for 48 h. The reaction mixture is then partitioned between water and ethyl acetate. The ethyl acetate phase is washed three times with water and once with satd NaCl solution, dried and filtered, and the filtrate is evaporated. The red-brown residue is suspended in hexane, 2-amino-3-ethoxycarbonyl-5-(4-nitrophenyl)pyrrole precipitating as a crude product (purity 93%) which is used for the next stage without further purification; MS: (M)⁺ = 275.

Stage 19.2: 2.5 g (97 mmol) of 2-amino-3-ethoxycarbonyl-5-(4-nitrophenyl)pyrrole, 19.4 ml of formamide, 9.7 ml of DMF and 3.1 ml of formic acid are stirred at 150°C together for 22 h. 1 ml of isopropanol is added to the warm reaction mixture. After cooling the reaction mixture, the precipitated product is filtered off. It is washed successively three times with 10 ml of ethanol each time, twice with 10 ml of isopropanol each time and twice with 10 ml of hexane each time. 4-Hydroxy-6-(4-nitrophenyl)-7H-pyrrolo[2,3-d]pyrimidine is obtained as rust-brown crystals which are employed for the next stage; MS: (M)⁺ = 256.

Stage 19.3: By heating 4-hydroxy-6-(4-nitrophenyl)-7H-pyrrolo[2,3-d]pyrimidine with POCl₃, 4-chloro-6-(4-nitrophenyl)-7H-pyrrolo[2,3-d]pyrimidine is prepared (purity 93%); m.p. > 280°C; FAB-MS: (M+H)⁺ = 275.

Stage 19.4: By boiling 0.25 g (0.91 mmol) of 4-chloro-6-(4-nitrophenyl)-7H-pyrrolo[2,3-d]pyrimidine with 0.19 ml of 3-chloroaniline in 5 ml of n-butanol, 4-(3-chloroanilino)-6-(4-nitrophenyl)-7H-pyrrolo[2,3-d]pyrimidine is obtained as rust-brown crystals; m.p. > 250°C; ¹H-NMR (360 Mhz, DMSO-d₆): 12.95 (s, pyrrole-NH), 10.3 (s, aniline-NH), 8.45 (s, pyrimidine-H), 8.24 (s, aromatic H), 7.18-8.4 (7 aromatic H + pyrrole-5H); MS: (M)⁺ = 365.

Stage 19.5: 150 mg (0.41 mmol) of 4-(3-chloroanilino)-6-(4-nitrophenyl)-7H-pyrrolo[2,3-d]pyrimidine are hydrogenated with 50 mg of Raney nickel in 20 ml of THF/

methanol at RT and normal pressure for 5 h, the desired product precipitating in the course of this. The catalyst is filtered off and the filter residue is washed with warm THF. The filtrate is evaporated to dryness. The crude product is purified by digesting several times in methanol and precipitating from THF/hexane, whereupon 6-(4-aminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine is obtained as pale beige crystals; m.p. >290°C; ¹H-NMR (360 MHz, DMSO-d₆): 12.05 (s, pyrrole-NH), 9.38 (s, aniline-NH), 8.31 (s, pyrimidine-H), 8.24 (s, aromatic H), 7.80 (d, aromatic H), 7.53 (d, 2 aromatic H), 7.35 (t, aromatic H), 7.05 (d, aromatic H), 6.90 (s, pyrrole-5H), 6.64 (d, 2 aromatic H), 5.35 (s, NH₂); MS: (M)⁺ = 335.

Example 20: Analogously to Example 16, the following are prepared from 6-(3-aminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine and the corresponding alkyl sulfochloride:

- a) 4-(3-chloroanilino)-6-(3-methylsulfonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 300°C; FAB-MS: (M+H)⁺ = 414,
- b) 4-(3-chloroanilino)-6-(3-ethylsulfonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. 228-230°C; FAB-MS: (M+H)⁺ = 428, and
- c) 4-(3-chloroanilino)-6-(3-isopropylsulfonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. 233°C; FAB-MS: (M+H)⁺ = 442.

The starting material is obtained as follows:

Stage 20.1: Analogously to stage 19.4. boiling 2.0 g (7.28 mmol) of 4-chloro-6-(3-nitrophenyl)-7H-pyrrolo[2,3-d]pyrimidine with 4.2 ml (40 mmol) of 3-chloroaniline in 150 ml of n-butanol gives 6-(3-nitrophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine as yellowish crystals of m.p. > 250°C; MS: M⁺ = 365.

Stage 20.2: Analogously to stage 19.5, reduction of 6-(3-nitrophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine with Raney nickel in THF/methanol gives 6-(3-aminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine; m.p. 293-295°C; MS: M⁺ = 336.

Example 21: 0.2 g (0.56 mmol) of 6-(4-aminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine (see stage 19.5), 0.097 ml (0.67 mmol) of N,N-dimethylformamide dimethyl acetal and 0.112 ml (0.73 mmol) of triethylamine are stirred at RT for 24 h in 10 ml of THF until all the starting material has disappeared in the TLC. The reaction solution is concentrated to

dryness in vacuo and the residue is chromatographed on a silica gel column. Crystallization from THF/hexane or ethyl acetate/hexane gives 4-(3-chloroanilino)-6-(4-[dimethylamino-methylenamino]phenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 300°C; MS: (M)⁺ = 390.

Example 22: Analogously to Example 21, the following compounds are prepared from 6-(4-aminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine (see stage 19.5) and the corresponding N,N-dialkylformamide dimethyl acetal or heterocyclyl aldehyde dimethyl acetal:

- a) 4-(3-chloroanilino)-6-(4-diethylaminomethylenamino)phenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 310°C; FAB-MS: (M+H)⁺ = 419,
- b) 4-(3-chloroanilino)-6-(4-[piperidinomethylenaminophenyl]-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 300°C; MS: (M)⁺ = 430,
- c) 4-(3-chloroanilino)-6-(4-[morpholinomethylenamino]phenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 310°C; MS: (M)⁺ = 432, and
- d) 4-(3-chloroanilino)-6-(4-[(4-methylpiperazino)methylenamino]phenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 310°C; FAB-MS: (M+H)⁺ = 446.

Example 23: Analogously to Example 21, the following compounds are prepared from 6-(3-aminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine (see stage 20.2) and the corresponding N,N-dialkylformamide dimethyl acetal or morpholinoaldehyde dimethyl acetal:

- a) 4-(3-chloroanilino)-6-(3-[dimethylaminomethylenamino]phenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. 266-268°C; MS: (M)⁺ = 390,
- b) 4-(3-chloroanilino)-6-(3-[diethylaminomethylenamino]-phenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. 171-172°C; FAB-MS: (M+H)⁺ = 419, and
- c) 4-(3-chloroanilino)-6-(3-[morpholinomethylenamino]phenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. 284-286°C; FAB-MS: (M+H)⁺ = 433.

Example 24: Analogously to Example 21, the following compound is prepared from (R)-6-(4-aminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine (see stage 16.2) and N,N-dimethylformamide dimethyl acetal:

(R)-6-(4-[dimethylaminomethylenamino]phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 300°C; MS: (M+H)⁺ = 385.

Example 25: Analogously to Example 21, the following compound is prepared from (R)-6-(3-aminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine (see stage 18.2) and N,N-dimethylformamide dimethyl acetal:

(R)-6-(3-[dimethylaminomethylenamino]phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine; m.p. 267-269°C; FAB-MS: (M+H)⁺ = 385.

Example 26: 738 mg (2.02 mmol) of 6-(4-carbonylphenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine are stirred at room temperature for 3 h with 3 equivalents of morpholine and 3.5 equivalents of DEPC (Aldrich) in DMF. The reaction solution is poured onto water and the solid is filtered off and washed with water and methanol. The product obtained is chromatographed on silica gel and eluted with chloroform/methanol/acetic acid/water (850:130:15:5; v/v). The product obtained is digested in diethyl ether, filtered off and dried. 4-(3-Chloroanilino)-6-(4-[morpholin-4-yl-carbonyl]phenyl)-7H-pyrrolo[2,3-d]pyrimidine is obtained in beige crystals; m.p. > 250°C; FAB-MS: (M+H)⁺ = 434.

Example 27: Analogously to Example 26, starting from (3-chloroanilino)-6-(4-carbonylphenyl)-7H-pyrrolo[2,3-d]pyrimidine and N-methylpiperazine 4-(3-chloroanilino)-6-(4-[4-methylpiperazin-1-yl]-carbonylphenyl)-7H-pyrrolo[2,3-d]pyrimidine is obtained; m.p. 250°C; FAB-MS: (M+H)⁺ = 447.

Example 28: 300 mg (0.89 mmol) of 6-(4-aminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine (see Stage 19.5), dissolved in 20 ml of abs. THF and 2 ml (3.56 mmol) of DMA are treated with 0.29 ml of ethyl isocyanate (FLUKA) with exclusion of moisture and heated under reflux until starting material is no longer present in the TLC (24 h). The reaction mixture is evaporated to dryness in vacuo and the crude product is chromatographed on silica gel, ethyl acetate/methanol being used as the eluent. Fractions which contain the desired product are combined and evaporated to dryness. The residue is dissolved in a little THF. The target compound is precipitated/crystallized by addition of n-hexane. Colourless crystals of 4-(3-chloroanilino)-6-(4-[N³-ethylureido]phenyl)-7H-pyrrolo[2,3-d]pyrimidine are obtained; m.p. > 290 °C, FAB-MS: (M+H)⁺ = 407.

Example 29: Analogously to Example 28, the following compounds are prepared from 6-(3-aminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine (see Stage 20.2) and the corresponding alkyl isocyanate or phenyl isocyanate:

- a) 4-(3-chloroanilino)-6-(3-[N³-ethylureido]phenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 300°C; FAB-MS: (M+H)⁺ = 407, and
b) 4-(3-chloroanilino)-6-(3-[N³-phenylureidophenyl]-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 300 °C; FAB-MS: (M+H)⁺ = 455.

Example 30: Analogously to Example 28, (R)-6-(4-[N³-ethylureido]phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine is prepared from (R)-6-(4-amino-phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine (see Stage 16...) and ethyl isocyanate; m.p. 238-240°C; FAB-MS: (M+H)⁺ = 401.

Example 31: Analogously to Example 28, (R)-6-(3-[N³-ethylureido]-phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine is prepared from (R)-6-(3-amino-phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine (see Stage 18.2) and ethyl isocyanate; m.p. 177-178°C; FAB-MS: (M+H)⁺ = 401.

Example 32: Analogously to the method described in Example 28, 300 mg (0.89 mmol) of 6-(4-aminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine (see Stage 19.5) dissolved in 20 ml of abs. THF and 2 ml of DMA, and 0.27 ml (3.56 mmol) of methyl isothiocyanate (EGA) give, after recrystallization from THF-n-hexane, 4-(3-chloroanilino)-6-(4-[N³-methylthioureido]phenyl)-7H-pyrrolo[2,3-d]pyrimidine in the form of colourless crystals; m.p. 275-276 °C; FAB-MS: (M+H)⁺ = 409.

Example 33: Analogously to Example 32, 6-(3-aminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine and methyl isothiocyanate give 4-(3-chloroanilino)-6-(3-[N³-methylthioureido]phenyl)-7H-pyrrolo[2,3-d]pyrimidine: m.p. 198 -200°C; FAB-MS: (M+H)⁺ = 409.

Example 34: Analogously to Example 32, (R)-6-(4-aminophenyl)-4-[(1-phenylethyl)-amino]-7H-pyrrolo[2,3-d]pyrimidine (see Stage 16.2) and methyl isothiocyanate give (R)-6-(4-[N³-methylthioureido]phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]-pyrimidine; m.p. 225-228°C; FAB-MS: (M+H)⁺ = 403.

Example 35: Analogously to Example 32, (R)-6-(3-aminophenyl)-4-[(1-phenylethyl)-amino]-7H-pyrrolo[2,3-d]pyrimidine (see Stage 18.2) and methyl isothiocyanate give (R)-6-(3-[N³-methylthioureido]phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]-pyrimidine; m.p. 188-190°C; FAB-MS: (M+H)⁺ = 403.

Example 36: 300 mg (0.89 mmol) of 6-(4-aminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine (see Stage 19.5), dissolved in 2.7 ml of abs. dioxane and 0.13 ml of 2,6-lutidine, are treated with a solution of 0.10 ml (0.98 mmol) of methyl chloroformate in 1.8 ml of abs. dioxane with the exclusion of moisture and stirred at RT until starting material is no longer present in the TLC. The reaction mixture is added to 50 ml of water. It is then extracted with 200 ml of ethyl acetate and 10 ml of 5% aqueous sodium hydrogencarbonate solution. The combined ethyl acetate phases are washed 3 times with water, dried and evaporated in vacuo. The residue is chromatographed on silica gel, eluting with methylene chloride and increasing amounts of methanol. The target compound, 4-(3-chloroanilino)-6-(4-methoxycarbonylamino)phenyl)-7H-pyrrolo[2,3-d]pyrimidine, is crystallized from methanol or acetone in the form of slightly yellow-coloured crystals; m.p. > 300°C; FAB-MS: (M+H)⁺ = 394.

Example 37: Analogously to Example 36, the following compounds are prepared from 6-(4-aminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine (see Stage 19.5) and the corresponding alkyl chloroformate:

- a) 4-(3-chloroanilino)-6-(4-ethoxycarbonylamino)phenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 300°C; FAB-MS: (M+H)⁺ = 408,
- b) 4-(3-chloroanilino)-6-(4-isopropoxy)carbonylamino)phenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 300°C; FAB-MS: (M+H)⁺ = 422 and
- c) 4-(3-chloroanilino)-6-(4-[(2-methylpropyloxy)carbonylamino]phenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 282-284°C; FAB-MS: (M+H)⁺ = 436.

Example 38: 3.53 g (9.0 mmol) of 4-(3-chloroanilino)-6-(4-ethoxycarbonylphenyl)-7H-pyrrolo[2,3-d]pyrimidine are suspended in 150 ml of THF. At 54°C, a total of 0.845 g (21.6 mmol) of lithium aluminium hydride are introduced in the course of 5 h. For working up, 1 ml of water, 2 ml of 1N sodium hydroxide solution and 1 ml of water, followed by 10 g of sodium sulfate, are added successively. The solid is filtered off and the filtrate is concentrated. The residue obtained is washed with methanol and diethyl

ether and then dried. 4-(3-Chloroanilino)-6-(4-hydroxymethylphenyl)-7H-pyrrolo[2,3-d]pyrimidine is obtained in colourless crystals; m.p. > 250°C; FAB-MS (M+H)⁺ = 351.

Example 39: The following compounds are obtained analogously to the process described in this text:

- a) (R)-6-(3-benzylaminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine; m.p. 253-255°C,
- b) 6-(4-benzyloxy-3-methoxyphenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine; m.p. 237-238°C,
- c) 6-(4-benzyloxy-3-methoxyphenyl)-4-(3-methylanilino)-7H-pyrrolo[2,3-d]pyrimidine; m.p. 231-234°C,
- d) 6-(4-hydroxy-3-methoxyphenyl)-4-(3-methylanilino)-7H-pyrrolo[2,3-d]pyrimidine; m.p. 234-236°C,
- e) 4-anilino-6-(4-hydroxy-3-methoxyphenyl)-7H-pyrrolo[2,3-d]pyrimidine hydrochloride; m.p. 242-246°C,
- f) 4-(3-chloroanilino)-6-(4-hydroxy-3-methoxyphenyl)-7H-pyrrolo[2,3-d]pyrimidine hydrochloride; m.p. > 250°C,
- g) 4-(3-chloroanilino)-6-(4-(fur-2-yl-carbonylamino)phenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 300°C,
- h) 4-(3-chloroanilino)-6-(4-(thien-2-yl-carbonylamino)phenyl)-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 300°C,
- i) 6-(4-benzylaminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine; m.p. > 300°C,
- j) (R)-6-(4-methoxyphenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine; m.p. 256-257°C,
- k) 4-(3-chloroanilino)-6-{4-[(1-dimethylamino-1-isopropylmethyl)amino]phenyl}-7H-pyrrolo[2,3-d]pyrimidine; m.p. 255-257°C, and
- l) 4-(3-chloroanilino)-6-(thiazol-2-yl)-7H-pyrrolo[2,3-d]pyrimidine.

Example 40: Dry-filled capsules

5000 capsules, each comprising as active ingredient 0.25 g of one of the compounds of the formula I mentioned in the preceding Examples, are prepared as follows:

Composition

active ingredient	1250 g
talc	180 g
wheat starch	120 g
magnesium stearate	80 g
lactose	20 g

Preparation process: The substances mentioned are pulverized and forced through a sieve of 0.6 mm mesh size. 0.33 g portions of the mixture are dispensed into gelatin capsules using a capsule-filling machine.

Example 41: Soft capsules

5000 soft gelatin capsules, each comprising as active ingredient 0.05 g of one of the compounds of the formula I mentioned in the preceding Examples, are prepared as follows:

Composition

active ingredient	250 g
Lauroglykol	2 litres

Preparation process: The pulverized active ingredient is suspended in Lauroglykol® (propylene glycol laurate, Gattefossé S.A., Saint Priest, France) and ground in a wet pulverizer to a particle size of approx. 1 to 3 µm. 0.419 g portions of the mixture are then dispensed into soft gelatin capsules using a capsule-filling machine.

Example 42: Soft capsules

5000 soft gelatin capsules, each comprising as active ingredient 0.05 g of one of the compounds of the formula I mentioned in the preceding Examples, are prepared as follows:

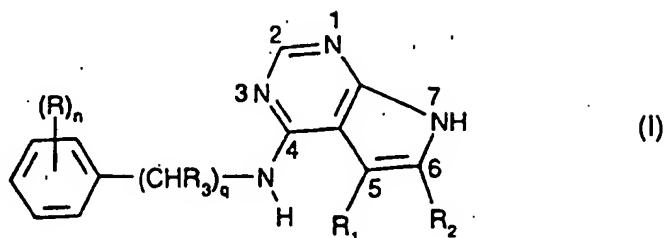

Composition

active ingredient	250 g
PEG 400	1 litre
Tween 80	1 litre

Preparation process: The pulverized active ingredient is suspended in PEG 400 (polyethylene glycol having an M_w of from approx. 380 to approx. 420, Fluka, Switzerland) and Tween®80 (polyoxyethylene sorbitan monolaurate, Atlas Chem. Ind. Inc., USA, supplied by Fluka, Switzerland) and ground in a wet pulverizer to a particle size of approx. 1 to 3 µm. 0.43 g portions of the mixture are then dispensed into soft gelatin capsules using a capsule-filling machine.

WHAT IS CLAIMED IS:

1. A 7H-pyrrolo[2,3-d]pyrimidine derivative of the formula I

in which n is 0 to 3,

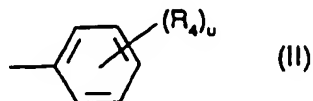

q is 0 or 1,

R is halogen, lower alkyl, hydroxymethyl, aminomethyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxycarbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, it being possible, if two or more radicals R are present in the molecule, for these to be identical to or different from one another,

one of the radicals R₁ and R₂ is hydrogen or lower alkyl,

and the other of the radicals R₁ and R₂ is

a) a radical of the formula II

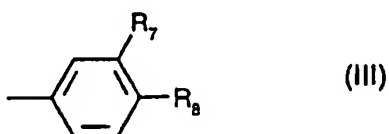

in which u is 1 to 3 and

at least one radical R₄ is amidino, guanidino, ureido, N³-lower alkylureido, N³,N³-di-lower alkylureido, N³-phenylureido, N³,N³-diphenylureido, thiocarbamoyl, thioureido, N³-lower alkylthioureido, N³,N³-di-lower alkylthioureido, lower alkoxycarbonylamino, benzyloxycarbonylamino, morpholine-4-carbonyl, piperazine-1-carbonyl, 4-lower alkylpiperazine-1-carbonyl, lower alkylsulfonylamino, benzenesulfonylamino, toluenesulfonylamino, thiophene-2-carbonylamino, furan-2-carbonylamino,

benzylamino, hydroxymethyl, aminomethyl or a radical of the formula $-N=C(R_5)-R_6$, in which R_5 is hydrogen or lower alkyl and R_6 is di-lower alkylamino, piperidino, 4-lower alkylpiperazino or morpholino, and the other radical(s) R_4 is (are) halogen, lower alkyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkoxy carbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, it being possible, if two or more radicals R_4 are present in the molecule, for these to be identical to or different from one another, or is

b) a radical of the formula III

in which R_7 is lower alkoxy or benzyloxy and R_8 is hydroxyl or benzyloxy, or is

- c) amino-lower alkyl, whose amino group is substituted by one or two hydroxy-lower alkyl, amino-lower alkyl, carboxy-lower alkyl, lower alkoxy carbonyl-lower alkyl, benzyloxycarbonyl-lower alkyl or benzyl radicals, which in the phenyl moiety are unsubstituted or substituted by halogen, lower alkyl, hydroxymethyl, aminomethyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxy carbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, or is
- d) piperidine-1-carbonyl, piperazine-1-carbonyl, 4-lower alkylpiperazine-1-carbonyl, morpholine-4-carbonyl, thiocarbamoyl, a heterocyclic radical bonded via a ring carbon atom and having five ring members and 1-4 ring heteroatoms, selected from oxygen, nitrogen and sulfur, or is
- e) 4-lower alkylpiperazinomethyl or a lower alkyl radical which is substituted by a heterocyclic radical other than piperazinyl and having five or six ring members and 1-4 ring heteroatoms, selected from oxygen, nitrogen and sulfur, or is
- f) a radical of the formula $-CH=N-OR_9$ in which R_9 is hydrogen or lower alkyl, or
- g) if q is 1, additionally to the definitions given above in the sections a) to f) can also be phenyl which is substituted by halogen, lower alkyl, trifluoromethyl or lower alkoxy, and

R_3 is hydrogen, lower alkyl, lower alkoxy carbonyl, carbamoyl, N-lower alkylcarbamoyl or N,N-di-lower alkylcarbamoyl, or its salts.

2. A compound of the formula I according to claim 1 in which

R_1 is hydrogen,

R_2 is pyrrolyl, thienyl, furyl, tetrazol-5-yl which is unsubstituted or substituted by lower alkyl or thiazol-2-yl which is unsubstituted or substituted by lower alkoxyphenyl, or methyl which is substituted by pyrrolyl, thienyl, furyl, morpholino, 4-lower alkylpiperazin-1-yl, tetrazol-5-yl which is unsubstituted or substituted by lower alkyl, or thiazol-2-yl which is unsubstituted or substituted by lower alkoxyphenyl, and the other radicals and symbols are as defined in claim 1, or a salt thereof.

3. A compound of the formula I according to claim 1 in which

n is 0 or 1,

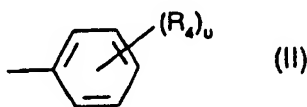

q is 0 or 1,

R is chlorine,

R_1 is hydrogen,

R_2 is

a) a radical of the formula II

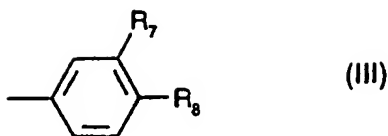

in which u is 1 and

R_4 is N^3 -lower alkylureido, N^3 -phenylureido, N^3 -lower alkylthioureido, lower alkoxy carbonylamino, benzyloxy carbonylamino, morpholine-4-carbonyl, piperazine-1-carbonyl, 4-lower alkylpiperazine-1-carbonyl, lower alkylsulfonylamino, benzenesulfonylamino, toluenesulfonylamino, furan-2-carbonylamino, thiophene-2-carbonylamino, benzylamino, hydroxymethyl or a radical of the formula $-N=C(R_5)-R_6$ in which R_5 is hydrogen or lower alkyl and R_6 is di-lower alkylamino, piperidino, 4-lower alkylpiperazino or morpholino,

or is

b) a radical of the formula III

in which R_7 is lower alkoxy and R_8 is hydroxyl or benzyloxy, or is

c) aminomethyl whose amino group is substituted by one or two hydroxy-lower alkyl or benzyl radicals which in the phenyl moiety are unsubstituted or substituted by hydroxyl or lower alkoxy, or is

d) piperazine-1-carbonyl, 4-lower alkylpiperazine-1-carbonyl, morpholine-4-carbonyl, thiocarbamoyl, thiazol-2-yl, 4-(4-methoxyphenyl)thiazol-2-yl, 4-ethylthiazol-2-yl, 4,5-dimethylthiazol-2-yl, tetrazol-5-yl, 2-methyltetrazol-5-yl or 1-methyltetrazol-5-yl, or is

e) 4-lower alkylpiperazinomethyl or morpholinomethyl, or is

f) a radical of the formula $-CH=N-OR_9$, in which R_9 is hydrogen or lower alkyl, or

g) if q is 1, additionally to the definitions given above in sections a) to f) can also be phenyl which is substituted by lower alkoxy, and

R_3 is hydrogen or lower alkyl,

or a pharmaceutically acceptable salt thereof.

4. A compound of the formula 1 according to claim 1 or a pharmaceutically acceptable salt thereof, selected from

4-(3-chloroanilino)-6-[(4-methylpiperazin-1-yl)methyl]-7H-pyrrolo[2,3-d]pyrimidine,

4-(3-chloroanilino)-6-(morpholin-4-yl)methyl]-7H-pyrrolo[2,3-d]pyrimidine,

4-(3-chloroanilino)-6-[bis(2-hydroxyethyl)aminomethyl]-7H-pyrrolo[2,3-d]pyrimidine,

4-(3-chloroanilino)-6-[(4-methoxybenzylamino)methyl]-7H-pyrrolo[2,3-d]pyrimidine,

4-(3-chloroanilino)-6-[(4-hydroxybenzylamino)methyl]-7H-pyrrolo[2,3-d]pyrimidine,

(E)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine-6-carbaldehyde oxime,

(Z)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine-6-carbaldehyde oxime,

4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine-6-carbaldehyde O-methyloxime,

4-(3-chloroanilino)-6-(morpholin-4-yl-carbonyl)-7H-pyrrolo[2,3-d]pyrimidine,

4-(3-chloroanilino)-6-[(4-methylpiperazin-1-yl)carbonyl]-7H-pyrrolo[2,3-d]pyrimidine,

4-(3-chloroanilino)-6-(thiocarbamoyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-[4-(4-methoxyphenyl)thiazol-2-yl]-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-ethylthiazol-2-yl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4,5-dimethylthiazol-2-yl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(tetrazol-5-yl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(2-methyltetrazol-5-yl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(1-methyltetrazol-5-yl)-7H-pyrrolo[2,3-d]pyrimidine,
(R)-6-(4-methylsulfonylaminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine,
(R)-6-(4-ethylsulfonylaminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine,
(R)-6-(4-isopropylsulfonylaminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine,
(R)-6-(3-methylsulfonylaminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine,
(R)-6-(3-ethylsulfonylaminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine,
(R)-6-(3-isopropylsulfonylaminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine,
6-(4-methylsulfonylaminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-ethylsulfonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-isopropylsulfonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-phenylsulfonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(3-methylsulfonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(3-ethylsulfonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(3-isopropylsulfonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-[dimethylaminomethylenamino]phenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-[diethylaminomethylenamino]phenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-[piperidinomethylenaminophenyl]-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-[morpholinomethylenamino]phenyl)-7H-pyrrolo[2,3-d]pyrimidine,

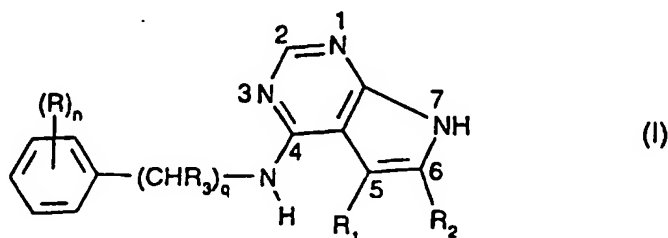

4-(3-chloroanilino)-6-(4-[(4-methylpiperazino)methylenamino]phenyl)-7H-pyrrolo[2,3-d]-pyrimidine,
4-(3-chloroanilino)-6-(3-[dimethylaminomethylenamino]phenyl)-7H-pyrrolo[2,3-d]-pyrimidine,
4-(3-chloroanilino)-6-(3-[diethylaminomethylenamino]phenyl)-7H-pyrrolo[2,3-d]-pyrimidine,
4-(3-chloroanilino)-6-(3-[morpholinomethylenamino]phenyl)-7H-pyrrolo[2,3-d]-pyrimidine,
(R)-6-(4-[dimethylaminomethylenamino]phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine,
(R)-6-(3-[dimethylaminomethylenamino]phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-[morpholin-4-ylcarbonyl]phenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-[4-methylpiperazin-1-ylcarbonyl]phenyl)-7H-pyrrolo[2,3-d]-pyrimidine,
4-(3-chloroanilino)-6-(4-[N³-ethylureido]phenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(3-[N³-ethylureido]phenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(3-[N³-phenylureidophenyl]-7H-pyrrolo[2,3-d]pyrimidine,
(R)-6-(4-[N³-ethylureido]phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine,
(R)-6-(3-[N³-ethylureido]phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-[N³-methylthioureido]phenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(3-[N³-methylthioureido]phenyl)-7H-pyrrolo[2,3-d]pyrimidine,
(R)-6-(4-[N³-methylthioureido]phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]-pyrimidine,
(R)-6-(3-[N³-methylthioureido]phenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]-pyrimidine,
4-(3-chloroanilino)-6-(4-methoxycarbonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-ethoxycarbonylaminophenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-isopropoxyloxycarbonylaminophenyl)-7H-pyrrolo[2,3-d]-pyrimidine,
4-(3-chloroanilino)-6-(4-[(2-methylpropyloxy)carbonylamino]phenyl)-7H-pyrrolo[2,3-d]-pyrimidine,
(R)-6-(3-benzylaminophenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine,
6-(4-benzyloxy-3-methoxyphenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine,

6-(4-benzyloxy-3-methoxyphenyl)-4-(3-methylanilino)-7H-pyrrolo[2,3-d]pyrimidine,
6-(4-hydroxy-3-methoxyphenyl)-4-(3-methylanilino)-7H-pyrrolo[2,3-d]pyrimidine,
4-anilino-6-(4-hydroxy-3-methoxyphenyl)-7H-pyrrolo[2,3-d]pyrimidine hydrochloride,
4-(3-chloroanilino)-6-(4-hydroxy-3-methoxyphenyl)-7H-pyrrolo[2,3-d]pyrimidine-
hydrochloride,
4-(3-chloroanilino)-6-(4-{fur-2-ylcarbonylamino}phenyl)-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-{thien-2-ylcarbonylamino}phenyl)-7H-pyrrolo[2,3-d]pyrimidine,
6-(4-benzylaminophenyl)-4-(3-chloroanilino)-7H-pyrrolo[2,3-d]pyrimidine,
(R)-6-(4-methoxyphenyl)-4-[(1-phenylethyl)amino]-7H-pyrrolo[2,3-d]pyrimidine,
4-(3-chloroanilino)-6-(4-[(1-dimethylamino-1-isopropylmethylene)amino]phenyl)-7H-
pyrrolo[2,3-d]pyrimidine and
4-(3-chloroanilino)-6-(thiazol-2-yl)-7H-pyrrolo[2,3-d]pyrimidine.

5. A compound of the formula I according to any one of claims 1 - 4 or a pharmaceutically acceptable salt of such a compound for use in a method for the therapeutic treatment of the human or animal body.
6. A pharmaceutical composition comprising a compound of the formula I according to any one of claims 1 - 4 or a pharmaceutically acceptable salt of such a compound, together with a pharmaceutical carrier.
7. A pharmaceutical composition for the treatment of tumours in warm-blooded animals including humans, comprising, in a dose effective against tumours, a compound of the formula I according to any one of claims 1 - 4 or a pharmaceutically acceptable salt of such a compound, together with a pharmaceutical carrier.
8. The use of a compound of the formula I according to any one of claims 1 - 4 or of a pharmaceutically acceptable salt of such a compound in the preparation of pharmaceutical compositions for use in the chemotherapy of tumours.
9. The use of a compound of the formula I according to any one of claims 1 - 4 or of a pharmaceutically acceptable salt of such a compound in the chemotherapy of tumours.

10. A method of treating warm-blooded animals including humans, which comprises administering to such a warm-blooded animal suffering from a tumour disease, in a dose effective against tumours, a compound of the formula I according to any one of claims 1 - 4 or a pharmaceutically acceptable salt of such a compound.

11. A process for the preparation of a 7H-pyrrolo[2,3-d]pyrimidine derivative of the formula I

in which n is 0 to 3,

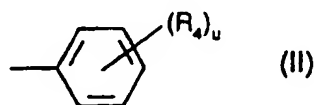

q is 0 or 1,

R is halogen, lower alkyl, hydroxymethyl, aminomethyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxycarbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, it being possible, if two or more radicals R are present in the molecule, for these to be identical to or different from one another,

one of the radicals R_1 and R_2 is hydrogen or lower alkyl,

and the other of the radicals R_1 and R_2 is

a) a radical of the formula II

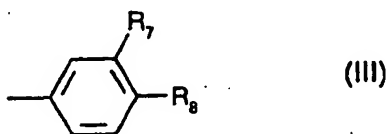

in which u is 1 to 3 and

at least one radical R_4 is amidino, guanidino, ureido, N^3 -lower alkylureido, N^3,N^3 -di-lower alkylureido, N^3 -phenylureido, N^3,N^3 -diphenylureido, thiocarbamoyl, thioureido, N^3 -lower alkylthioureido, N^3,N^3 -di-lower alkylthioureido, lower alkoxycarbonylamino,

benzyloxycarbonylamino, morpholine-4-carbonyl, piperazine-1-carbonyl, 4-lower alkylpiperazine-1-carbonyl, lower alkylsulfonylamino, benzenesulfonylamino, toluenesulfonylamino, thiophene-2-carbonylamino, furan-2-carbonylamino, benzylamino, hydroxymethyl, aminomethyl or a radical of the formula $-N=C(R_5)-R_6$, in which R_5 is hydrogen or lower alkyl and R_6 is di-lower alkylamino, piperidino, 4-lower alkylpiperazino or morpholino, and the other radical(s) R_4 is (are) halogen, lower alkyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkoxycarbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, it being possible, if two or more radicals R_4 are present in the molecule, for these to be identical to or different from one another, or is

b) a radical of the formula III .

in which R_7 is lower alkoxy or benzyloxy and R_8 is hydroxyl or benzyloxy, or is

c) amino-lower alkyl, whose amino group is substituted by one or two hydroxy-lower alkyl, amino-lower alkyl, carboxy-lower alkyl, lower alkoxycarbonyl-lower alkyl, benzyloxycarbonyl-lower alkyl or benzyl radicals, which in the phenyl moiety are unsubstituted or substituted by halogen, lower alkyl, hydroxymethyl, aminomethyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxycarbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, or is

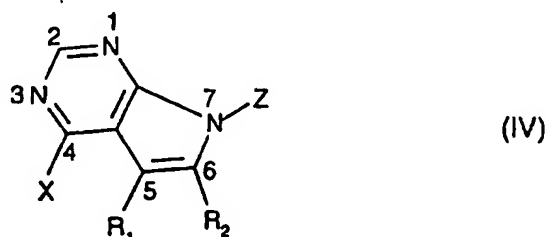

d) piperidine-1-carbonyl, piperazine-1-carbonyl, 4-lower alkylpiperazine-1-carbonyl, morpholine-4-carbonyl, thiocarbamoyl, a heterocyclic radical bonded via a ring carbon atom and having five ring members and 1-4 ring heteroatoms, selected from oxygen, nitrogen and sulfur, or is

e) 4-lower alkylpiperazinomethyl or a lower alkyl radical which is substituted by a heterocyclic radical other than piperazinyl and having five or six ring members and 1-4 ring heteroatoms, selected from oxygen, nitrogen and sulfur, or is

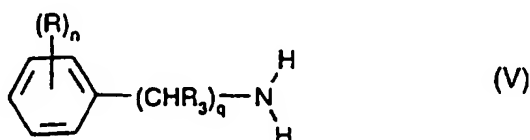

f) a radical of the formula $-CH=N-OR_9$ in which R_9 is hydrogen or lower alkyl, or

g) if q is 1, additionally to the definitions given above in the sections a) to f) can also be phenyl which is substituted by halogen, lower alkyl, trifluoromethyl or lower alkoxy, and R_3 is hydrogen, lower alkyl, lower alkoxy carbonyl, carbamoyl, N-lower alkylcarbamoyl or N,N-di-lower alkylcarbamoyl, or a salt thereof, which comprises

a) reacting a pyrrolo[2,3-d]pyrimidine derivative of the formula IV

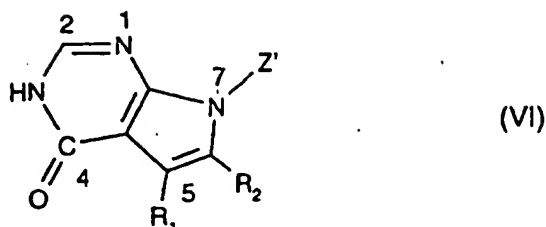

in which X is a suitable leaving group, Z is hydrogen or 1-aryl-lower alkyl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radicals R_1 and R_2 if necessary being protected by easily removable protective groups, with an aniline derivative of the formula V

in which R, R_3 , n and q are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, and removing protective groups present and, if present, the 1-aryl-lower alkyl radical Z, or

b) reacting a pyrrolo[2,3-d]pyrimidin-4-one derivative of the formula VI

in which Z' is 1-aryl-lower alkyl and R₁ and R₂ are as defined above for compounds of the formula I, free functional groups present in the radicals R₁ and R₂ if necessary being protected by easily removable protective groups, in the presence of a dehydrating agent and a tertiary amine, with a phenylamine of the formula V above and removing protective groups present, or

c) for the preparation of a compound of the formula I in which the radical R is hydroxyl or in which one of the radicals R₁ or R₂ is amino-lower alkyl whose amino group is substituted by one or two benzyloxycarbonyl-lower alkyl or benzyl radicals which are substituted by hydroxyl in the phenyl moiety, and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which the radical R is methoxy or in which one of the radicals R₁ or R₂ is amino-lower alkyl whose amino group is substituted by one or two benzyloxycarbonyl-lower alkyl or benzyl radicals which are substituted by methoxy in the phenyl moiety, and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radicals R, R₁ and R₂ if necessary being protected by easily removable protective groups, with boron tribromide, and removing protective groups present, or

d) for the preparation of a compound of the formula I in which one of the radicals R₁ and R₂ is aminomethyl whose amino group is substituted by one or two hydroxy-lower alkyl, amino-lower alkyl, carboxy-lower alkyl, lower alkoxy carbonyl-lower alkyl, benzyloxycarbonyl-lower alkyl or benzyl radicals which in the phenyl moiety are unsubstituted or substituted by halogen, lower alkyl, hydroxymethyl, aminomethyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxy carbonyl, carbamoyl, N-lower alkyl carbamoyl, N,N-di-lower alkyl carbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, or in which one of the radicals R₁ and R₂ is 4-lower

alkylpiperazinomethyl, morpholinomethyl or piperidinomethyl, and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is formyl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, with an amine of the formula VII

in which

α) R_{10} is hydrogen, hydroxy-lower alkyl, amino-lower alkyl, carboxy-lower alkyl, lower alkoxy-carbonyl-lower alkyl, benzyloxy-carbonyl-lower alkyl or benzyl, the benzyloxy-carbonyl-lower alkyl or benzyl radicals in the phenyl moiety being unsubstituted or substituted by halogen, lower alkyl, hydroxymethyl, aminomethyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxy-carbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, and

R_{11} is hydroxy-lower alkyl, amino-lower alkyl, carboxy-lower alkyl, lower alkoxy-carbonyl-lower alkyl, benzyloxy-carbonyl-lower alkyl or benzyl, the benzyloxy-carbonyl-lower alkyl or benzyl radicals in the phenyl moiety being unsubstituted or substituted by halogen, lower alkyl, hydroxymethyl, aminomethyl, hydroxyl, lower alkanoyloxy, lower alkoxy, carboxyl, lower alkanoyl, benzoyl, lower alkoxy-carbonyl, carbamoyl, N-lower alkylcarbamoyl, N,N-di-lower alkylcarbamoyl, cyano, amino, lower alkanoylamino, lower alkylamino, N,N-di-lower alkylamino or trifluoromethyl, or

β) in which the radicals R_{10} and R_{11} together are pentane-1,5-diyl, 3-N-lower alkyl-3-azapentane-1,5-diyl or 3-oxapentane-1,5-diyl, catalytically hydrogenating the product and then removing protective groups present, or

e) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula $-\text{CH}=\text{N}-\text{OR}_9$ in which R_9 is hydrogen or lower alkyl, and the other substituents are as defined above for compounds of the formula I,

reacting a compound of the formula I, in which one of the radicals R_1 and R_2 is formyl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, with a hydroxylamine derivative of the formula VIII

in which R_{12} is hydrogen or lower alkyl, and removing protective groups present, or

f) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is piperidine-1-carbonyl, piperazine-1-carbonyl, 4-lower alkylpiperazine-1-carbonyl or morpholine-4-carbonyl, and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is carboxyl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, or a reactive carboxylic acid derivative of such a compound, with an amine of the formula VII

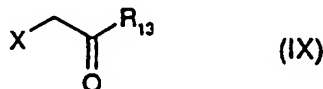

in which the radicals R_{10} and R_{11} together are pentane-1,5-diyl, 3-azapentane-1,3-diyl, 3-N-lower alkyl-3-azapentane-1,3-diyl or 3-oxapentane-1,3-diyl, and then removing protective groups present, or

g) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is thiocarbamoyl and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is aminocarbonyl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, with Lawesson's reagent, and then removing protective groups present, or

h) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is R_{13} -thiazol-2-yl in which R_{13} in each case is unsubstituted or substituted lower

alkyl or phenyl and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is thiocarbamoyl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, with a compound of the formula IX

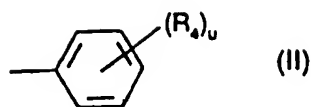

in which X is a leaving group and R_{13} in each case is unsubstituted or substituted lower alkyl or phenyl, free functional groups present in the radical R_{13} if necessary being protected by easily removable protective groups, and then removing protective groups present, or

i) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is tetrazol-5-yl and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is cyano and other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, with a suitable alkali metal azide, and then removing protective groups present, or

j) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is 2-lower alkyltetrazol-5-yl and the other substituents are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is tetrazol-5-yl and the other substituents are as defined above for compounds of the formula I, free functional groups present in the radical R if necessary being protected by easily removable protective groups, with the appropriate lower alkyl iodide, and then removing protective groups present, or

k) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II

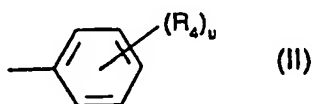

in which at least one radical R_4 is lower alkylsulfonylamino, benzenesulfonylamino or toluenesulfonylamino, and the other substituents and symbols are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II in which at least one radical R_4 is amino and the other substituents and symbols are as defined above for compounds of the formula I, free functional groups present in the radical R and, if present, the other radicals R_4 if necessary being protected by easily removable protective groups, with a compound of the formula X

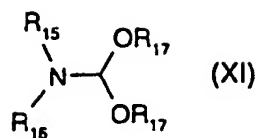

in which X is chlorine or bromine and R_{14} is lower alkyl, phenyl or 4-methylphenyl, and then removing protective groups present, or

I) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II

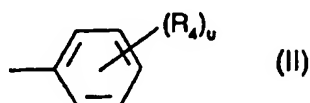

in which at least one radical R_4 is a radical of the formula $-N=C(R_5)-R_6$ in which R_5 is hydrogen and R_6 is as defined above for compounds of the formula I and the other substituents and symbols are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II in which at least one radical R_4 is amino and other substituents and symbols are as defined above for compounds of the formula I, free functional groups present in the radical R and, if present, the other radicals R_4 if necessary being protected by easily removable protective groups, with an acetal of the formula XI

- 77 -

in which R_{15} and R_{16} are each individually lower alkyl or together are pentane-1,5-diyl, 3-N-lower alkyl-3-azapentane-1,5-diyl or 3-oxapentane-1,5-diyl, and R_{17} is lower alkyl, and then removing protective groups present, or

m) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II

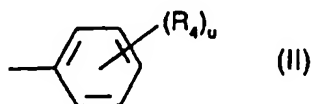

in which at least one radical R_4 is N^3 -lower alkylureido or N^3 -phenylureido and the other substituents and symbols are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II in which at least one radical R_4 is amino and the other substituents and symbols are as defined above for compounds of the formula I, free functional groups present in the radical R and, if present, the other radicals R_4 if necessary being protected by easily removable protective groups, with an isocyanate of the formula XII

in which R_{18} is lower alkyl or phenyl, and then removing protective groups present, or

n) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II

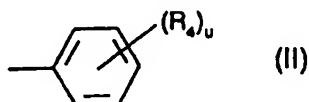

in which at least one radical R_4 is N^3 -lower alkylthioureido or N^3 -phenylthioureido and the other substituents and symbols are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II in which at least one radical R_4 is amino and the other substituents and symbols are as defined above for compounds of the formula I, free functional groups present in the radical R and, if present, the other radicals R_4 if necessary being protected by easily removable protective groups, with an isothiocyanate of the formula XIII

in which R_{18} is lower alkyl or phenyl, and then removing protective groups present, or

o) for the preparation of a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II

in which at least one radical R_4 is lower alkoxy-carbonylamino or benzyloxycarbonyl-amino and the other substituents and symbols are as defined above for compounds of the formula I, reacting a compound of the formula I in which one of the radicals R_1 and R_2 is a radical of the formula II in which at least one radical R_4 is amino and the other substituents and symbols are as defined above for compounds of the formula I, free functional groups present in the radical R and, if present, the other radicals R_4 if necessary being protected by easily removable protective groups, with a chloroformic acid ester of the formula XIV

in which R_{18} is lower alkyl or benzyl, and then removing protective groups present,

and after carrying out one of the process variants a) to o), if necessary for the preparation of a salt, converting a free compound of the formula I obtained into a salt or, if necessary for the preparation of a free compound, converting a salt of a compound of the formula I obtained into the free compound.

INTERNATIONAL SEARCH REPORT

Intern. Application No

PCT/EP 97/04564

A. CLASSIFICATION OF SUBJECT MATTER

IPC 6 C07D487/04 A61K31/505 //(C07D487/04,239:00,209:00)

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC 6 C07D A61K

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	WO 95 19774 A (WARNER-LAMBERT) 27 July 1995 see claim 1	1,5
A	--- EP 0 682 027 A (CIBA-GEIGY) 15 November 1995 see page 4, line 5 - line 16; claim 1 -----	1,5

☐ Further documents are listed in the continuation of box C.☒ Patent family members are listed in annex.

* Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier document but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

"B" document member of the same patent family

Date of the actual completion of the international search

INTERNATIONAL SEARCH REPORT

International application No.
PCT/EP 97/04564

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:
see FURTHER INFORMATION sheet PCT/ISA/210
2. ☐ Claims Nos.:
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

☐ The additional search fees were accompanied by the applicant's protest.

☐ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Remark : Although claims 9 and 10 are directed to a method of treatment of the human/animal body , the search has been carried out and based on the alleged effects of the compound/composition.
